```

We now have Docker installed and running successfully on Ubuntu 22.04.1 LTS. So let's verify the number of Docker images available. We already have minikube installed and configured; so one image is available. You may find this list empty in your case.

```
osfy@ubuntu-22-04-1-lts:~/Desktop$ sudo docker images

REPOSITORY                    TAG       IMAGE ID
CREATED        SIZE
gcr.io/k8s-minikube/kicbase   v0.0.35   7fb60d0ea30e   8
weeks ago   1.12GB

Verify the number of Docker containers available. You may find
this list empty in your case.

osfy@ubuntu-22-04-1-lts:~/Desktop$ sudo docker ps -a

CONTAINER ID   IMAGE                                 COMMAND
CREATED        STATUS                    PORTS     NAMES
bddcebbb9e3e   gcr.io/k8s-minikube/kicbase:v0.0.35   "/usr/
local/bin/entr…"   7 weeks ago   Exited (137) 6 days ago
minikube
```

Let's verify Docker installation by running a container. Run *nginx* in the Docker container using the *docker run* command. In case the image is not available locally, it will be downloaded.

```
osfy@ubuntu-22-04-1-lts:~/Desktop$ sudo docker run -d -p
9999:80 nginx

Unable to find image 'nginx:latest' locally
latest: Pulling from library/nginx

```

Now, verify the Docker images and run containers again. We can find nginx images and containers in a list that was not available earlier.

```
osfy@ubuntu-22-04-1-lts:~/Desktop$ sudo docker images

REPOSITORY                    TAG       IMAGE ID
CREATED        SIZE

```

Visit *http://localhost:9999/* and you will find the nginx 'Welcome' page.

We have successfully verified Docker installation. We must now do Java and Maven verification.

Java and Maven installation

We need Java and Maven to build a package file for a sample application that we are going to run in a Docker container. Install Java and Maven in Ubuntu OS. Once that's done successfully, verify the Java version using the *java –*
