
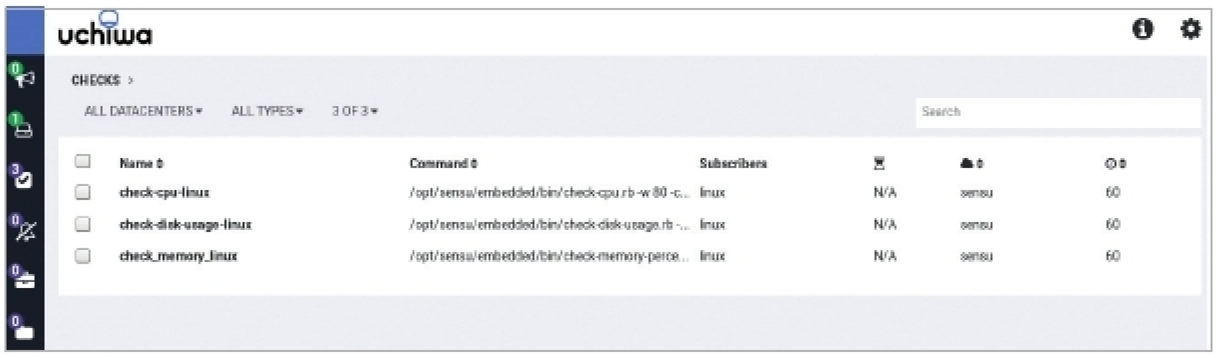

Figure 3: List of Sensu checks

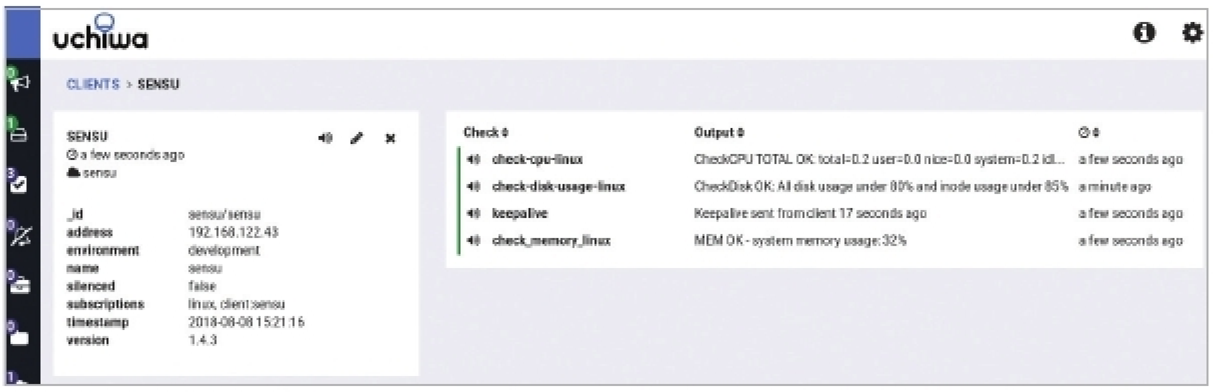

Figure 4: Output of Sensu checks

```
     ]
    }
  }
}
```

```
Listing 6.2: check_disk_usage_linux.json
{
 "checks": {
   "check-disk-usage-linux": {
     "command": "/opt/sensu/embedded/bin/check-disk-usage.rb
-w 80 -c 90",
     "interval": 60,
     "subscribers": [
       "linux"
     ]
   }
 }
}
Listing 6.3: check_memory_linux.json
{
 "checks": {
   "check_memory_linux": {
     "command": "/opt/sensu/embedded/bin/check-memory-
percent.rb -w 90 -c 95",
     "interval": 60,
     "subscribers": [
       "linux"
     ]
   }
 }
}
```

Finally, the Sensu services are restarted. The Ansible playbook to install the checks is given below, for reference:

```
- name: Enable checks
  hosts: sensu
  become: yes
  become_method: sudo
  gather_facts: true
  tags: [checks]

  tasks:
    - name: Install checks
      command: "sensu-install -p {{ item
}}"
      args:
        chdir: /opt/sensu/embedded/bin
      with_items:
        - cpu-checks
        - disk-checks
        - memory-checks

    - name: Create check json files
      copy:
        src: "../../files/{{ item }}.json"
        dest: "/etc/sensu/conf.d/{{ item }}.json"
      with_items:
        - check_cpu_linux
        - check_disk_usage_linux
        - check_memory_linux
    - name: Restart services
      systemd:
        name: "{{ item }}"
        state: restarted
      with_items:
        - sensu-server
        - sensu-api
        - sensu-client
- uchiwa
```

The above playbook can be invoked using the following command:

```
$ ansible-playbook -i inventory/kvm/inventory playbooks/
configuration/sensu.yml --tags checks -vv -K
```

The Sensu dashboard will now have the installed checks as shown in Figure 3.

The results of the check output are also available in the dashboard as shown in Figure 4.

You are encouraged to read the Sensu Core documentation available at *https://docs.sensu.io/sensu-core/1.4/* to learn more about the framework and its usage. END
