
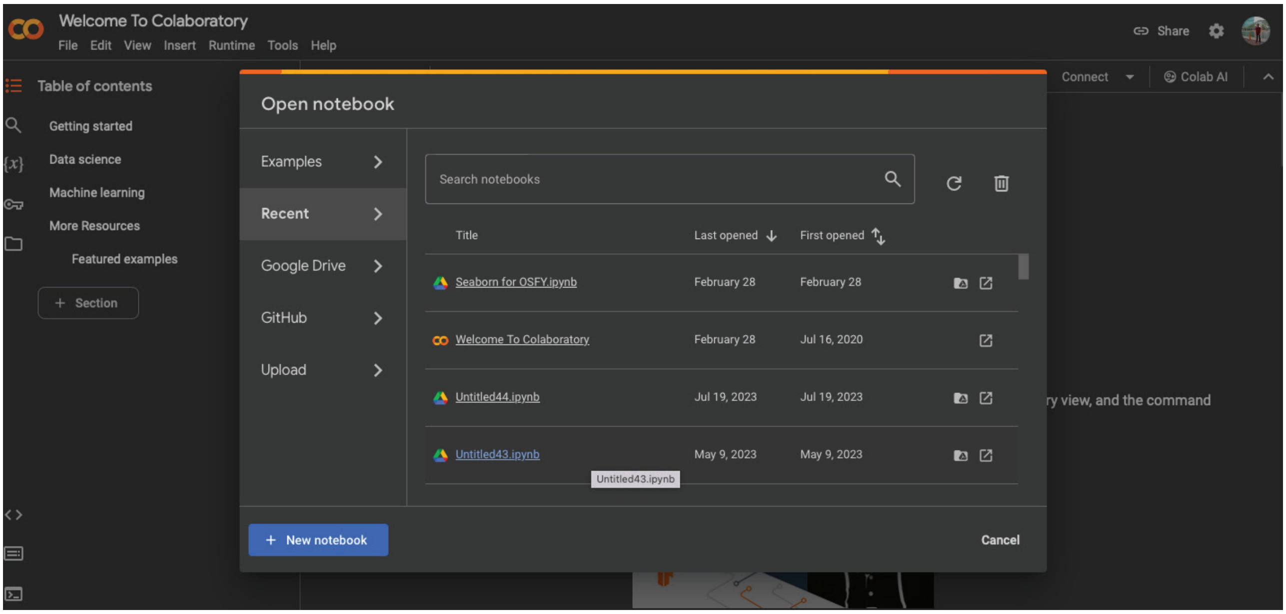

Figure 1: New notebook

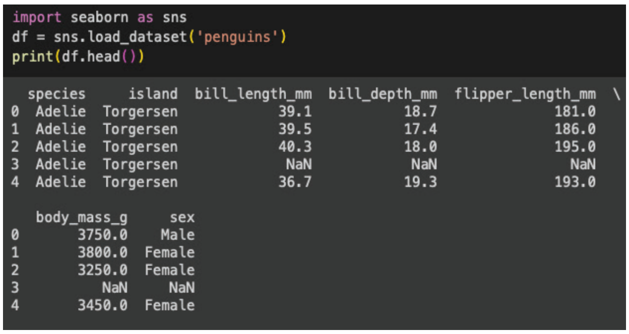

```
import seaborn as sns
df = sns.load_dataset('penguins')
print(df.head())

  species     island  bill_length_mm  bill_depth_mm  flipper_length_mm  \
0  Adelie  Torgersen            39.1           18.7              181.0
1  Adelie  Torgersen            39.5           17.4              186.0
2  Adelie  Torgersen            40.3           18.0              195.0
3  Adelie  Torgersen             NaN            NaN                NaN
4  Adelie  Torgersen            36.7           19.3              193.0

   body_mass_g     sex
0       3750.0    Male
1       3800.0  Female
2       3250.0  Female
3          NaN     NaN
4       3450.0  Female
```
Figure 2: Importing data

This dataset is available in the Seaborn library itself. We'll see how we can import and use it. There are many features in this dataset like the length and width of the penguins' beaks, their gender, which island they belong to, etc.

```
import matplotlib
import scipy
import seaborn as sns
import pandas as pd
```

Now let us import the required libraries. These would have been installed along with Seaborn. The penguin dataset can be imported using the code given in Figure 2, and we can also see the top few rows in this figure.

Let's start the data visualisation. The first step is to set the context and let our library know the IDE we are using, because each IDE and user interface may have different parameters and this may make the visualisations look different. These minor details are very important in data visualisation, as we are trying to make the graphs and visuals more understandable and useful.

So how do we let Seaborn know that we are using a Google Colab/Jupyter notebook? This is done using the following line.

```
sns.set_context("notebook")
```

Now let us plot a graph of the width and length of the penguin beaks. For this, use the following code, which will generate a scatter plot. (A scatter plot is used to identify the patterns and the correlations between two features.) The output for the code given below is shown in Figure 3.

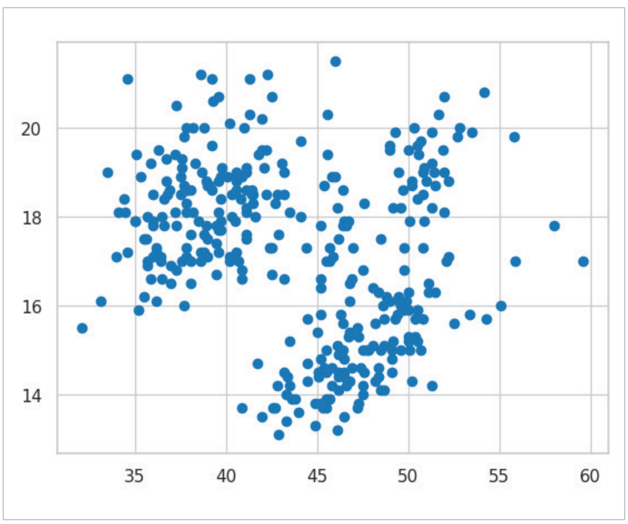

Figure 3: Scatter plot
