

Sniff! Sniff!! Who Clogs My Network?

Some network connectivity and troubleshooting tools.

What do you do when you've just set up a network and the basic stuff is all fine, but something is still wrong. For instance, you're able to ping one host, but not another? Or connectivity to some sites is slow, though to most other sites it appears to be fast enough, and your ISP say it's not their headache?

In this article, we'll run through some of my favourite tools for network troubleshooting. If you're a network admin, you might find these tools useful. However,

I have tried, as usual, to favour concepts and description over detailed command information, so even a normal home user might find this article interesting as a casual read. I expect anyone with a serious interest in one of the tools to check out the *man* pages or other documentation anyway.

All at sea

I'm an avid quizzer, as I'm sure some of you are. I sometimes conduct quizzes too, and one of my favourite questions is: what is the connection between the
