

Set up in 2017, Josh Software is a software services company that does product engineering using open source technologies. **Sethupathi Asokan, co-founder and director of Josh Software**, talks to **Sreejani Bhattacharyya** of **OSFY** about the company's growth plans and the technologies it is implementing to achieve its targets. In this exclusive interaction, he also recounts how he got interested in open source and what the journey has been like so far.

Sethupathi Asokan, co-founder and director of Josh Software

“Start contributing to open source, write technical blogs and learn what’s trending in the technology universe”

Q : What is your business model? How do you generate revenue?

A: We get into rescue missions for our clients, and deliver a very scalable and high quality product. Reputation is the key. With our good reputation, we get referred by our clients to potential leads, which generates new business.

Q : Can you talk about some important projects you’ve completed and others that you are working on?

A: We are working with a well-known media channel in India, now

part of an international group. We were introduced to the company to rescue its product, and complete the work needed on it. We are also working with the insurance company QuickInsure, as a technology partner.

Q : What are some of the major challenges you’ve faced while working on these projects?

A: We haven’t faced any major challenges on the technology side — just a few non-technical issues, like adapting to the differing work culture of our clients. These were overcome easily.

Q : What are the essential skills required to be hired by Josh Software?

A: One should be eager to learn all the time. Make mistakes but don’t repeat them. Those who wish to join us should know that this is not just a job. It is more than that.

Q : What are the company’s expansion plans, outside or in India?

A: We have already set up Josh Software Inc., a wholly-owned subsidiary, in Dallas, Texas. As we
