

Countly

The Right Choice for Mobile App Analytics

Mobile app analytics is a boon to mobile marketers in this competitive era, helping businesses to track user behaviour as well as app performance. Companies use analytics as a tool for business and marketplace exploration, and to expand the efficiency of their services and apps.

Businesses tend to measure everything as most business leaders believe that if you can't measure something, you can't improve it. Analytics helps to measure and analyse numerous aspects, and is omnipresent now. In the era of ubiquitous computing, most activities are carried out by means of apps installed on handheld devices. The analysis of these apps plays a vital role in enabling marketers to gain important insights regarding

customer behaviour, etc, for the growth of their business. Mobile app analytics tools evaluate the performance of the applications by tracking user behaviour. Finding an appropriate mobile app analytics tool is a challenging task for businesses.

Countly is one of the best choices for businesses looking for mobile analytics. It can be self-hosted or hosted on a private cloud. It can work on Ubuntu, Red Hat Linux and CentOS, and with software like Node.

js and MongoDB. It needs at least 2 CPUs to perform well. It can aid tens of billions of hits per month on a scalable infrastructure. By default, it operates on real data. It consists of three kinds of open source components — standalone, jQuery and related components, and Node.js and related components. It consists of SDKs for Android, iOS, Windows and Mac OS platforms. Contributors have provided many SDKs for different development environments, which include
