

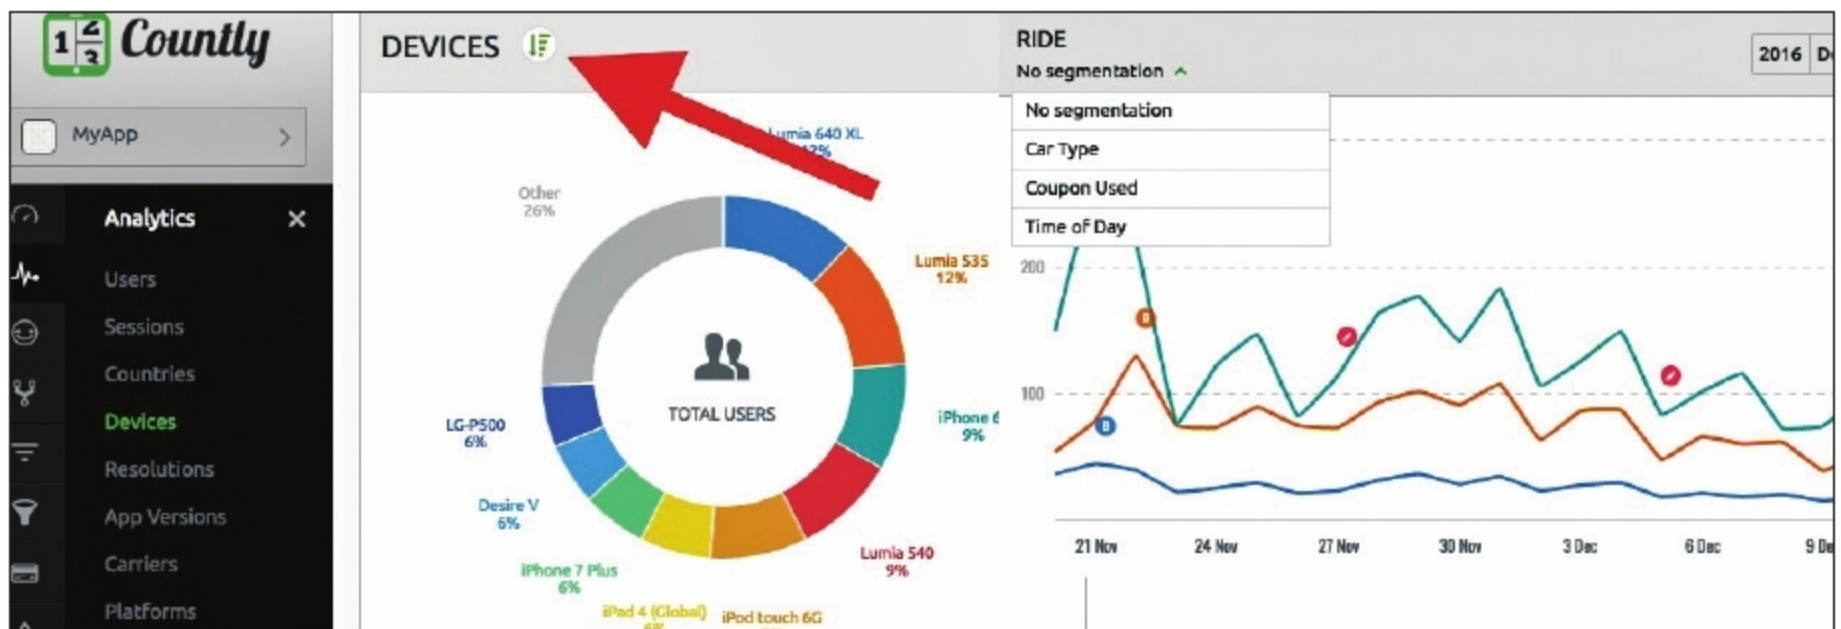

Figure 1: Drilling down data in County

Figure 2: Adding and updating cohorts in County

Phonegap, React Native, Icenium and Unity 3D. A simple SDK is enough to get data analytics if you have Internet connectivity. Any device that is able to send HTTP requests can be part of analytics in County. The examples are smart TVs, set-top boxes, IP security cameras, etc.

Features and services

County has numerous features that make it useful for businesses in the current era. Some of the features are:

- It's a real-time open source analytics app that can be hosted on your own servers.
- It can be extended in terms of functionalities via several plugins.
- Users can customise several events based on business requirements.
- It has a user retention feature.
- Customisation is possible in dashboards.
- Revenue analytics is available in the enterprise version.
- It enables drilling down of data.
- Funnels help in analysing the user flow through a mobile.
- Various parameters can be tracked — sessions, loyalty, carriers, offline activity, device type, platforms, etc.
- It features data export.
- It enables mobile app cohort analysis.
- It gives rich notifications.
- Has GDPR and HIPAA compliance.
- Enables crash and error management.
- Comes with advanced security features.
- Has efficient APIs.

County provides two main types of services to customers via its enterprise edition and the community edition. The enterprise edition is available for a 30-day free trial period, after which users have to pay for the services. It includes features such as:

- Premium County plugins
- On-premise or in the cloud services
- Granular data
- SLA (Service Level Agreement)
- Custom SDK and plugin development services
- Analytics consultancy

The community edition is free, though you need your own analytics service for it. It includes basic County plugins and aggregated data facilities.
