

Drilling down data

This is the most powerful feature of the enterprise edition of Countly. Figure 1 shows the different screens during the process of drilling down data.

Countly Drill offers a number of functionalities:

- Advanced segmentation of data by various filters, i.e., AND, OR and By.
- Visualisation of data by means of different graph types such as line, pie and bar.
- Drilling down the data based on the time horizon, i.e., hourly, daily, weekly, monthly and yearly.
- Viewing the data based on different parameters; i.e., how many times an event occurred, how many users performed an event, and the average criterion.
- Offers session drills.
- Can build complex queries.

to existing reports, user profiles, funnels, retentions and flow data. It provides flexibility to create your own cohort by applying several conditions. You can also update it by providing several filters. Figure 2 shows how to add and modify cohorts in Countly.

Cohorts are regenerated automatically, so the list of customers in them is kept up to date. Cohorts help businesses in many of the following ways:

- Users in the same clusters with similar characteristics can be identified and their progress tracked.
- Various insights can be generated by

combining the users of a cohort.

- A cohort is very vital to evaluate the life cycle of the mobile app.
- It helps to distinguish customers.
- It compares the performance between two or more groups.
- It helps in speedy decisions for the management of the business.

To sum up, mobile app analytics is indispensable for businesses, and helps them gain numerous insights that can boost business growth.

Countly is one of the best open source tools that can help them with mobile data analytics. **END**
