Branch	HEAD

Figure 5: Dashboard for the Prometheus monitoring tool

Start *sensu-agent* using a service manager:

```
$ service sensu-agent start
```

Sysdig

Sysdig is the most widely adopted container monitoring tool that provides support for alerts, data aggregation and visualisation. It is easy to deploy and provides a simple interface, where users can see the information about the CPU, memory and network usage. Thus, Sysdig is one of the good choices to monitor the performance of running container technology. It can be installed by executing the following commands:

```
$ curl -s https://s3.amazonaws.com/download.draios.com/stable/install-sysdig | bash
$ csysdig -vcontainers
```

A screenshot of the dashboard of this container monitoring tool is shown in Figure 7.

In the landscape of container technology, making a informed refined choice from the variety of container monitoring tools is the need of the hour. This article will help IT admin, to make an informed choice about the better container performance monitoring tools that can be deployed easily with features of alert mechanism, support for different data types, and dashboard visualisation. **END** 

```
root@server3:~# curl -s https://packagecloud.io/install/repositories/sensu/stable/script.deb.sh
Detected operating system as Ubuntu/bionic.
Checking for curl...
Detected curl...
Checking for gpg...
Detected gpg...
Running apt-get update... done.
Installing apt-transport-https... done.
Installing /etc/apt/sources.list.d/sensu_stable.list...done.
Importing packagecloud gpg key... done.
Running apt-get update... done.

The repository is setup! You can now install packages.
root@server3:~# sudo apt-get install sensu-go-backend
```

Figure 6: Installing the Sensu container monitoring tool

Viewing: Containers For: whole machine									
Source: Live System Filter: container.name != host									
CPU	PROCS	THREADS	VIRT	RES	FILE	NET	ENGINE	IMAGE	
4.00	1	21	133M	41M	25M	0.00	docker	gcr.io/google-containers	
0.00	1.00	1.00	2M	4K	0	0.00	docker	alpine	
0.00	1	18	161M	25M	0	0.00	docker	prom/prometheus	

Figure 7: Dashboard of the Sysdig container monitoring tool

Step 2: Install *sensuctl*. Add the Sensu repository:

```
$ curl -s https://packagecloud.io/install/repositories/sensu/stable/script.deb.sh | sudo bash
```

Next, install the *sensu-go-cli* package:

```
$ sudo apt-get install sensu-go-cli
```

Step 3: Install Sensu agents. Add the Sensu repository:

```
$ curl -s https://packagecloud.io/install/repositories/sensu/stable/script.deb.sh | sudo bash
```

Next, install the *sensu-go-agent* package:

```
$ sudo apt-get install sensu-go-agent
```
