

Cyber security startup Polyverse raises US\$ 8 million

Geekwire has reported that Polyverse raised US\$ 8 million to expand the reach of its cyber security technology. The company's main product 'Polymorphing for Linux' scrambles open source code without affecting its operation. It shields it from hackers on the lookout to exploit the weaknesses in the code. Japanese security giant Soliton Systems KK and existing investors were involved in the funding round.

The report added that Polyverse has been validated by the US Department of Defence for mitigating zero-day attacks. It has also mitigated intrusions that occur when a vulnerability becomes public, as in the case of the WannaCry ransomware and the hacking of companies like Equifax. The company claims that its technology is "running on millions of servers."

The company has increased its employees by 50 per cent over the last year, and has approximately 30 people employed now. It plans to use the cash to expand in current markets like North America and Japan. It also aims to enter new territories like the UK and Singapore.

EY launches open source Baseline Protocol for public Ethereum blockchain

Ernst and Young has launched a new package of public domain blockchain tools called the Baseline Protocol, which will allow enterprises to conduct business

processes securely and privately on the public Ethereum blockchain. EY has developed the Baseline Protocol along with ConsenSys and Microsoft.

Paul Brody, EY global blockchain leader, said that over the last two years, EY has been advancing the state of the art for private,

IIT Kanpur organises 'Entrepreneurial Conclave' at Techkriti

The Indian Institute of Technology, Kanpur, recently organised the 'Entrepreneurial Conclave' in Techkriti, its annual technical and entrepreneurial fest. Held on March 20 and 21, Techkriti introduced new innovations and ideas in the field of technology and development. The Entrepreneurial Conclave was organised in collaboration with SIIC (Startup Incubation and Innovation Centre).

At the conclave this year, for the first time a startup expo was set up with over 50 startups from various sectors such as biotech, defence, aerospace, agritech and IT. The expo provided them with funding opportunities worth ₹ 30 million.

Techkriti, being the largest technology related entrepreneurial fest in Asia, aims to provide the best opportunities to college students. It does so by bringing them onto a platform with established business personalities, venture capitalists and angel investors.

The event also included talks from successful startup founders, government officials, venture capitalists and angel investors to motivate and guide young minds. The Entrepreneurial Conclave organised many competitions, which included business events such as Best Manager, Battlefield, Sub Operati, as well as entrepreneurial events like Upstart Pioneer, Pitch Premiere and Stockism – all of which came with considerable prize money. Workshops on stocks and investments, startup building, consulting and marketing management were also conducted to train students for the future.
