

agreed to use his group's libraries instead. He wouldn't agree to that either.

I couldn't make our managers realise that sharing code was in the company's interest.

Estimation

My manager once asked for my opinion on an estimation. One line bothered me: 'MIS Reports 6 months'. I mentioned that MIS Reports will need to be elaborated. Instead he said, "Let's call the Oracle expert," since this system was to be developed in Oracle. The Oracle expert agreed that the term was not specific enough. However, since he only had given the time estimate to the sales person, he did not wish to make any change. I tried, unsuccessfully, to argue that one cannot make an estimate without knowing the details and the number of reports, no matter what the tool.

I do not know what happened to the project. What I do know is that a year later, the salesman was asked to leave.

Linux abandoned

I set up a lab with a server and diskless Linux machines. My next plan was to add another server and provide server resources for student projects. From today's technology perspective, this would have obviously evolved to a private cloud for the student projects.

However, I was told that the jobs are in Windows, so disks were added to the diskless machines.

And the Linux effort died.

The regrets fall into the category of how the future will evolve. Given that the future is uncertain, it is hard to be without doubts. The lesson I will never succeed in learning is that how do you deal with people who are so sure when you are in doubt. **END** 🐧
