

As a global services company operating in fiercely competitive environments, Infosys has set up a well-established open source practice. **Gautam Khanna, VP & head - modernization practice, Infosys**, shares with **Rahul Chopra, editorial director, EFY Group**, how the company keeps its employees up-to-date with open source, motivates and helps them to contribute to the open source ecosystem, and more.

Gautam Khanna, VP & head - modernization practice, Infosys

“We follow a holistic approach to drive open source adoption across the client base at Infosys”

Q. What are your thoughts about the pace at which open source software (OSS) is being adopted amongst global enterprises (Top 2000 or 5000)? Is it accelerating?

A. Open source adoption in enterprises is growing more rapidly than ever. A recent global survey of IT leaders revealed that nearly 90 per cent see open source as necessary to their enterprises. Open source usage

is increasingly seen in categories like cloud management, security, analytics and storage, which have historically been more associated with proprietary products. Over two-thirds of the participants in the survey have increased their open source adoption in the last 12 months, and nearly 60 per cent expect to improve adoption levels over the next year as well.

These numbers reinforce what we have observed among our clients

across industry verticals – they are using open source more than ever in their modernization journeys. This is driven by the trifecta of unmatched innovation, quality, and value that open source delivers. However, what we have also observed is that there are differing levels of adoption across verticals. The retail and communication verticals are strategically and consistently adopting open source while financial
