

Catering to the skills diversity needed in an organization and hiring/retaining people are key challenges. In this new harsh reality, hiring talent that is passionate about learning becomes more important than finding talent with the right skills.

At Infosys, we are trying to address this challenge through a combination of hiring and reskilling.

Q. What would be your advice to tech professionals who want to benefit from these opportunities but don't know where to start?

A. My advice to tech professionals is straightforward; we are living in exciting times with limitless opportunities. Never before in the history of humanity have we seen such democratization of knowledge and technology, as today. There is

no defined starting line, but what is most important is to learn and apply the knowledge in real business problems continuously. Knowledge begets knowledge, if shared with a broader community. So we should also look at sharing knowledge through contributions, participation at various forums and collaboration. At Infosys, we have always believed and invested heavily in learning, and we have enabled our employees to learn anytime, anywhere, through our mobile learning platform, LEX, which has over 40K resources and 600+ courses. Employees are also encouraged to and recognised for sharing their knowledge, both externally and internally. We are collaborating with our strategic partners to contribute to open source communities jointly. As

we speak, we are working with one of our partners to launch an open source academy.

Q. Has there been an increase in the number of open source related professionals being hired at Infosys?

A. We are seeing a huge demand for open source technologies and most of our Top 200 clients are increasingly moving their legacy systems to open source technologies. We use a combination of refactoring our existing talent pool and hiring to meet the demand. **END**
