

it and comes with better community support. Second, LibreOffice's choice of open source licence gives it an advantage. Third, LibreOffice has a better marketing strategy. This includes faster development, better distribution, a light website and a greater focus on meeting the customer's needs.

LibreOffice is becoming more customer focused. It is trying to look sleek and professional, attracting users by providing a more polished product.

The code of both OpenOffice and LibreOffice is smaller, less buggy and crash-resistant. Besides, LibreOffice has added features. For example, if one wants to create an Adobe PDF-like file, this is possible in LibreOffice but not in OpenOffice. The performance of LibreOffice on Microsoft and Apple file formats has improved considerably, and Windows-specific improvements such as the ability to work with Microsoft's Active Directory have been introduced.

MS Office versus open source office suites

MS Office is still more powerful and easier to use. It has also more applications and is compatible with the vast majority of Word documents. Today, MS Office 365 is an ecosystem that includes online versions, a terabyte of online storage, and touch-oriented apps for Windows phones, Google Android, and Apple iPads and iPhones. OpenOffice and LibreOffice don't

A comparison between MS Office, OpenOffice and LibreOffice
