

Table 4: Team Explorer in Eclipse IDE

Work items	Builds	Settings
My favourites	My XAML builds	Team project
Team favourites	My favourites	- Security - Group membership - Work item areas - Work item iterations - Project alerts
Queries (we can create a new query and execute it from Eclipse) - My queries - Shared queries	Team favourites Build definitions XAML build definitions	Team project collection - Security - Group membership

New Java Class

Java Class

The use of the default package is discouraged.

Source folder:

Package:

☐ Enclosing type:

Name:

Modifiers: ☒ public ☐ package ☐ private ☐ protected
☐ abstract ☐ final ☐ static

Superclass:

Interfaces:

Which method stubs would you like to create?

☒ public static void main(String[] args)

☒ Constructors from superclass

☒ Inherited abstract methods

Do you want to add comments? (Configure templates and default value [here](#))

☐ Generate comments

Figure 1: Java class

To manage libraries, *jar* files or external *jar* files in Eclipse, we need to use the Java build path. It is useful to compile the Java project to provide dependencies/libraries, *jar* files or external *jar* files.

Go to *Java Properties* by right clicking on a Java project in the

Package Explorer view of Eclipse. Click on *Properties*. Select *Java Build Path*, and then click on *Libraries*.

Eclipse and Azure DevOps

Can we manage cloud and DevOps operations from Eclipse IDE? Yes, we can. Let's try it out for Azure

DevOps, earlier known as Visual Studio Team Foundation Server, and Microsoft Azure Cloud.

Visual Studio Team Explorer Everywhere (TEE) is an Eclipse plugin that provides a way to work with Team Foundation Server (TFS), Microsoft Azure Cloud and Azure DevOps, using both Team Foundation Version Control (TFVC) and Git version control systems.

Step 1: Go to the *Help* menu and select *Install New Software*

Step 2: Click on the *Add* button to add a new repository.

Step 3: Give the name and location as <https://dl.microsoft.com/eclipse>.

Step 4: Click on *Okay*.

Step 5: Select *All* in the list of features. Click on *Next*.

Step 6: Review install details and click on *Next*.

Step 7: Review licences and click on *I Accept*.

Step 8: Click on *Finish*.

Step 9: A new dialogue box will appear that says 'Would you like to restart Eclipse IDE to apply the changes?' Restart Eclipse.

Step 10: Click on *Open Perspective* and select *Team Foundation Server Exploring*.

Step 11: Click on *Connect to TFS / VSTS*.

Step 12: In the *Server Selection* dialogue box, select *Browse Visual Studio Team Services*.

Step 13: Another pop-up box will open with the URL and code.
