

Table 2 highlights Qt add-on modules, which bring additional value for specific purposes.

Name of module	Description
Active Qt	Classes for applications which use ActiveX and COM
Qt 3D	Real-time simulation system for 2D and 3D rendering
Qt Android Extras	Platform-specific APIs for Android
Qt Bluetooth	Provides access to Bluetooth hardware
Qt Concurrent	Classes for writing multi-threaded programs without using low-level threading primitives
Qt D-Bus	Classes for inter-process communication over D-Bus protocol
Qt Gamepad	Enables Qt applications to support the use of gamepad hardware
Qt Graphical Effects	Graphical effects
Qt Help	Documentation for applications
Qt Image Formats	Plugins for additional image formats: TIFF, MNG, TGA, WBMP
Qt Location	Displays map, navigation, and place content in a QML application
Qt MAC extras	Provides platform-specific APIs for MacOS
Qt NFC	Access to near-field communication (NFC) hardware
Qt OpenGL	OpenGL supported classes
Qt Positioning	Provides access to position, satellite and area monitoring classes
Qt Platform Headers	Classes that encapsulate platform-specific information
Qt Print Support	Classes to make printing easier and more portable
Qt Purchasing	In-app purchase of products in the Qt Applications module
Qt Quick Controls 1	Reusable Qt Quick based UI controls to create classic desktop-style user interfaces
Qt Quick Extras	Specialised set of controls that are used to build interfaces in Qt Quick
Qt Quick Widgets	Provides the C++ widget class for displaying the Qt Quick user interface
Qt Remote Objects	Provides an easy-to-use mechanism for sharing QObject's API between processes or devices
Qt Script	Classes for making Qt applications scriptable
Qt SCXML	Provides classes and tools for creating state machines from SCXML files and embedding them in applications
Qt Script Tools	Additional components for applications that use Qt Script
Qt Sensors	Provides access to sensor hardware and motion gesture recognition
Qt Serial Bus	Provides access to serial industrial bus interface
Qt Serial Port	Provides access to hardware and virtual serial ports
Qt Speech	Offers access to features such as text-to-speech
Qt SVG	Classes for displaying the contents of SVG files
Qt UI Tools	Classes for loading QWidget based forms created in Qt Designer dynamically
Qt WebChannel	Provides access to QObject or QML objects from HTML clients for seamless integration of Qt applications with HTML/JavaScript clients
Qt WebSockets	Provides WebSocket communication that is compliant with RFC 6455
Qt WebEngine	Classes and functions for embedding Web content in applications using the Chromium browser project
Qt WebView	Displays Web content in the QML application by using APIs native to the platform
Qt Windows Extras	Provides platform-specific APIs for Windows
Qt X11 Extras	Provides platform-specific APIs for X11
Qt XML	C++ implementations of SAX and DOM
Qt XML Patterns	Support for XPath, XQuery, XSLT and XML schema validation
Qt Wayland Compositor	A framework to develop a Wayland compositor
Qt Charts	UI components for displaying visually pleasing charts, driven by static or dynamic data models
Qt Data Visualization	UI components for creating 3D data visualisation
Qt Network Authorization	Provides support for OAuth-based authorisation to online services
Qt Virtual Keyboard	A framework for implementing different input methods as well as a QML virtual keyboard
Qt Quick WebGL	Provides a platform plugin that allows streaming Qt-Quick user interfaces over the network, using WebGL
