

Huobi Global makes cryptocurrency platform Huobi Chain open source

Huobi Global has open sourced cryptocurrency platform Huobi Chain, which was developed by Huobi Global and Nervos Network, a report by CoinDesk has revealed. It is now publicly available to all developers on GitHub.

The report states that Bo Wang, a Nervos researcher, has said that Huobi Global and Nervos Network are developing pluggable components for the network that will allow regulators to supervise contract deployments, asset holdings and transfers, as well as implement anti-money laundering

regulations. He also said that these components will allow banks and regulatory agencies to freeze assets and accounts during emergencies, through sidechains.

Huobi Chain will provide tools for pre-deployment audits and continuous tracking as per the report. Leon Li, the founder and CEO of Huobi Group, said that if banks and financial institutions do adopt permissionless blockchain technology fully, then a safe and secure environment can be created that will make it easier for them to transition their products and services to the blockchain.

LG open sources AI model optimisation tool, Auptimizer

Auptimizer simplifies the process of configuring many models that have different configurations with reproducibility, company sources claim. It also requires only a few lines of code, according to LG.

LG has open sourced Auptimizer, which has been developed by its Advanced AI division, and made it available on GitHub according to a report by VentureBeat. It is a

hyperparameter optimisation framework aimed to help with artificial intelligence (AI) model tweaking and book-keeping.

In a paper, the company has said that Auptimizer initialises a search space and configuration before proposing values for hyperparameters, and then trains the target model and updates the results. After that, it repeats the proposition, training, and updating stages until it identifies the optimal values.

The company guides users in a step-by step process through experiment-related configurations setups. It supports switching between different hyperparameter algorithms and computing resources without requiring users to rewrite the training script, claims LG.

India is the world's third largest open source user: Report

Globally, 1.3 million first-time contributors joined the open source community this year. According to GitHub's latest annual state of open source and community report, India is the third largest user of open source software globally.

China was the largest open source region outside of the US, followed
