

Benefit For:

CISOs

Gain risk clarity across any cloud from one integrated location. Reduce costs by consolidating cloud security on a comprehensive platform.

DevOps

Leverage one API-driven platform to protect any cloud resource at any stage of the lifecycle as well as integrate with your existing tools.

SecOps

Automatically prioritize alerts, auto-remediate critical security issues, and ensure compliance with company standards.

Benefits at a Glance

Prisma Cloud takes an integrated approach that enables SecOps and DevOps teams to accelerate cloud-native application deployment by shifting left and implementing security early in the development cycle.

Protect Containers, Serverless, and Hosts

Take advantage of container image analysis and vulnerability scanning across the entire container lifecycle, from development to registries and runtime.

Automatically deploy Layer 4 and web application firewalls (WAFs) to secure traffic into and between your cloud-native apps and microservices.

Gain Deep Cloud Visibility

Gain a unified view of security and compliance posture across the full cloud-native stack, application lifecycle, and cloud environments as soon new resource are deployed.

Empower DevSecOps

Implement security guardrails to prevent vulnerabilities and unsecure configuration issues from progressing forward in DevOps pipelines.

Ensure Governance and Compliance

Monitor all cloud resources continuously for misconfigurations, vulnerabilities, and other security threats.

Meet government- and company-mandated compliance requirements with ease across

the industry's most complete library of compliance standards.

The Prisma Cloud Mission

Protect every resource throughout the entire lifecycle, across any cloud.
