

Take Charge of Your Health with These FOSS Apps

We live in stressful times. This has led to increased health consciousness among individuals. There are now numerous devices and apps available that help you to keep track of your health parameters, right from simple blood pressure machines to Fitbit. Here is a list of FOSS apps to help you adopt practices that keep you healthy and fit.

Many of us are becoming health conscious now, and there are many apps out there that can help us stay healthy by tracking our physical activities, our calorie counts and heart rate. But most of the popular health apps are closed source. Being a FOSS enthusiast, I am a bit uncomfortable that my vital health data can be tracked and collated by some for-profit corporation.

Listed below are apps that help you to look into various aspects of your health but don't collect and sell your data to others.

Get Off Your Phone

Have you ever felt that you're addicted

to an app? That you've developed a liking for an app and found its content too good to give up? That you can't stop yourself from using the app even though you realise that it is consuming all your time and keeps distracting you from your real-life goals?

If so, 'Get Off Your Phone' is for you. This is a simple app that can lock particular apps for a specified period of time. You cannot use the locked apps until the time you set for them to be inaccessible has passed.

After installing the app, do a left swipe and it will open the *Options* drawer where you can select the apps that you want to lock. After that, you can return to the main screen, where

you can choose the time duration for locking the apps. At present, users are not allowed to specify the time duration but have to use the predefined timer sets that are available on the app. The app provides the following four timer sets for locking the apps:

- 30 minutes
- 1 hour
- 2 hours
- 3 hours

The next step is to set the desired state for the locked apps; it gives two options. The first option allows you to turn off only the Wi-Fi, and the second to turn off the mobile + Wi-Fi data. To set the second option, the
