aggressive — perhaps using the words from a scolding you remember receiving from someone close to you!

Pausing Healthily

Most of us work at a desk job that requires us to remain in one place for many hours. Even though our work demands our complete attention, it wouldn't hurt if you could spend a few minutes of your time on yourself.

Pausing Healthily helps you to take a break after a particular period and also shows you some simple exercises to do during that break.

The app has five default exercise sets:

1. Neck-head
2. Shoulder and arms
3. Back
4. Hips
5. Knee

You can choose the set, depending on your needs, or you can create your own exercises by clicking on the '+' sign on the *Exercise Sets* screen. This will prompt you to name the exercise set. The exercises are shown in the picture, along with brief instructions for

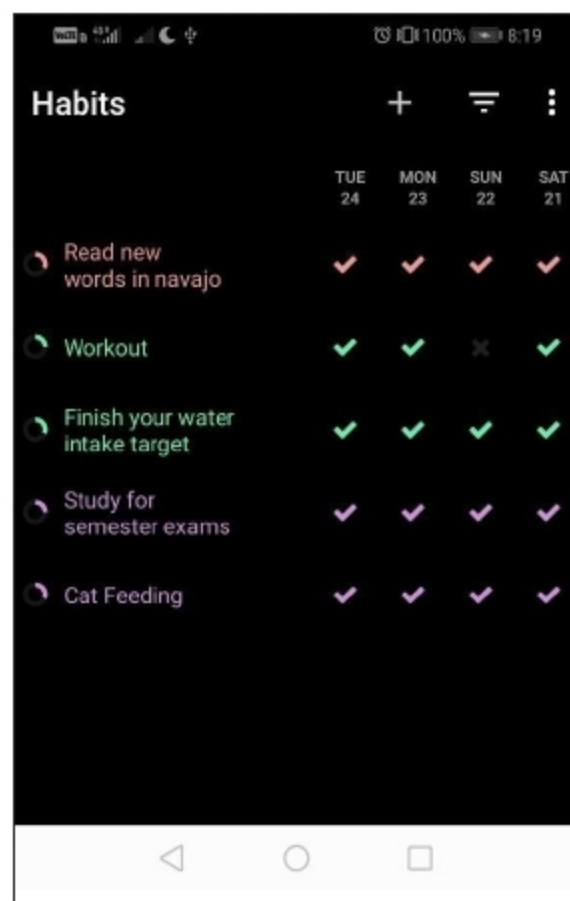

Figure 5: Loop Habit Tracker

them. You can add more exercises by clicking on the box below that picture.

If you're unsure about your exercise, just click on the names of the body parts (head, neck, arms, torso, pelvis and legs) that are given at the top. If you click on any one of these, the screen will show you the relevant exercises for that part of the body. The default time for each exercise is 30 seconds, but you can change this in *Settings*.

Once you're done with choosing the exercise set, you can return to the main screen where you have to choose the *Work Duration* and *Break Duration*. The app will show you the exercise set you've chosen. Now start the timer and return to your work. The app will send you the notification on when to take your break. Once you click on the notification, it will direct you to the exercise page at the top left corner, where you will see your allotted break timer and below that, the timer for each exercise along with that exercise's picture. At the bottom of the screen, you can see the basic controls (*Pause*, *Play*, *Next* and *Previous*). After you finish your session, the app will take

you to your main screen to set up a new exercise session, or you can set up continuous sessions based on your previous *Work Duration* and *Break Duration* in the settings.

Loop Habit Tracker

"Old habits die hard." This is an ancient proverb but holds true even today. *Loop Habit Tracker* helps you to replace a bad habit with a good one.

To start using this app, you need to enter a habit in the main screen. You have to click the '+' button, which brings up a floating window where you need to give your habit a name, answer the question that is posed to you about that activity/habit, your repetition preference and finally, your reminder preference. By default, the reminder is off, but if you wish to set it up for a particular activity, you need to set the time that the app should send you the reminder regarding that activity.

The notifications are sent according to the time preference you have set for each activity/habit. These are in the form of questions, and you just have to click on 'Check', which indicates that the activity is completed and you can see that a 'check' mark is shown for that activity.

This app shows you the detailed statistics of an activity, such as a monthly/yearly overview of that activity, the strength of the habit (how often you do it in a day, week, month, quarter and year), the history, your best streak and finally, the frequency of the activity.

There are a good number of apps out there that may perform the same tasks better than the apps featured in this article but, as mentioned earlier, if you're a privacy freak and a FOSS enthusiast, you can give these a try. **END** 🐧
