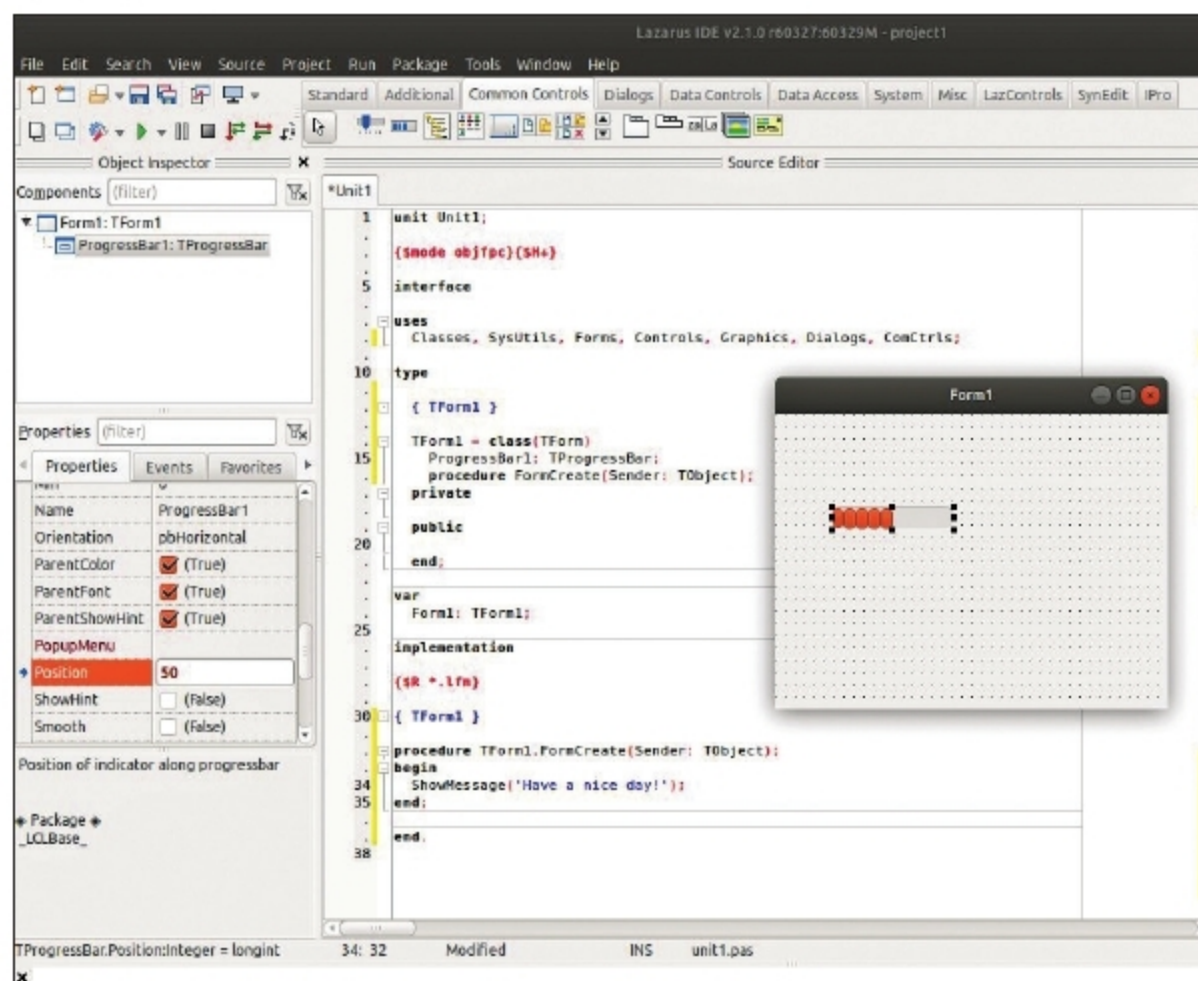

Figure 3: Lazarus IDE

Geany IDE

Geany IDE is GUI based and is considered very lightweight. It is basically a text editor that uses GTK+ and Scintilla along with IDE support. Geany is independently designed and requires fewer packages to perform. The GTK2 runtime library is the only thing needed for execution. Geany is easy to navigate and comes with the auto-completion feature. It supports various programming languages, like C++, C, Java, Python and many others.

Geany comes with syntax highlighting and is highly customised. You can add or remove options, windows and bars, according to your liking. It comes with various free-to-download plugins that are easily available as well.

Lazarus IDE
