

Michael A. and Shane Miller, Lazarus was launched in 1999. It is known as a cross-platform GUI based IDE, which can be used for quick application development. Lazarus comes with three primary features — fast execution speed, compilation speed and cross-compilation. Users can cross-compile from Windows to Linux and Mac OS, etc.

This particular IDE comes with the Lazarus component library and offers various facilities to developers, some of which are platform-specific. It is fast, powerful and easy to use. It is perfect for Android application development and uses Free Pascal, which comes with various new features.
