

Figure 7: Predicting the values of test data

```
plt.plot(x_train, y_train, 'go',
label='True data', alpha=0.5)
plt.plot(x_train, predicted, '-',
label='Predictions', alpha=0.5)
plt.legend(loc='best')
plt.show()
```

Figure 6 shows the linear model predicting the training data very accurately. Now let us try the same thing using the test data we created earlier:

```
with torch.no_grad(): # we don't need
gradients in the testing phase
    if torch.cuda.is_available():
        predicted =
model(Variable(torch.from_numpy(x_
```

```
test).cuda()).cpu().data.numpy()
    else:
        predicted =
model(Variable(torch.from_numpy(x_
test))).data.numpy()
    print("predicted=", predicted)

plt.clf()
plt.plot(x_test, y_test, 'go',
label='Test Data', alpha=0.5)
plt.plot(x_test, predicted, '-',
label='Predictions', alpha=0.5)
plt.legend(loc='best')
plt.show()
```

Figure 7 shows that we have accurately predicted the values of the test data as well. The linear regression model has been successfully executed. You can find all the source code resources used in this article at <https://github.com/shah78677/PyTorch-Experiments>. **END** 🐧

He is also a FOSS enthusiast and actively contributes to several open source projects. He blogs at codelatte.site, where he shares valuable insights and tutorials on emerging technologies.

OSFY Magazine Attractions During 2020-21

MONTH	THEME
March 2020	Mobile/Web App Development and Optimisation
April 2020	Cybersecurity, Open Source Firewall, Network Security and Monitoring
May 2020	AI, Deep Learning and Machine Learning
June 2020	DevOps Special
July 2020	Blockchain and Open Source
August 2020	Database Management and Optimisation
September 2020	Open Source and IoT
October 2020	Cloud Special: BigData, Hadoop, PaaS, SaaS, IaaS and Cloud
November 2020	Open Source on Windows
December 2020	Open Source Programming (Languages and Tools)
January 2021	Data Security, Storage and Backup
February 2021	Best in the World of Open Source (Tools and Services)
