

The OCF UCI is a programming interface that can be used to standardise connectivity between different manufacturers' cloud servers. It can also be used for connectivity between devices and the cloud. OCF sources said that the cloud application programming interface (API) will help the IoT industry to streamline partnerships. It will also help to avoid implementing and maintaining various proprietary programming interfaces at once.

John Park, executive director, Open Connectivity Foundation said, "Different configurations of the same OCF UCI can simplify collaboration between device manufacturers who wish to produce IoT devices but do not have the ability to develop and support their own cloud applications. This configuration can also help companies that have cloud applications and wish to expand the number of devices that can connect to them. Specifically, the manufacturers can produce a single device that connects to any cloud application, provided both implement the OCF UCI API. This enables a multitude of manufacturers to produce secure, interoperable IoT devices and delivers welcome flexibility to end users."

Products from BSC Computer GmbH, COMMAX, Haier, LG Electronics, Resideo, Samsung Electronics and SURE Universal were showcased in completely interoperable smart home demonstrations at the OCF IoT Breakthrough press event in Las Vegas in the US on January 6, 2020. These devices will complete OCF 2.1 certification in 2020, ensuring robust and secure connectivity between devices. Many of these and other industry-leading OCF member companies will be commercially launching products based on the OCF specification in 2020.

Narrative to open source its code base and sell its business

According to a report by *Neonewstoday*, Narrative has announced that it will open source its code base. It will also explore the possibility of selling its platform.

The company said that market events, regulatory uncertainty and limited resources were the contributing factors that led to the shutdown of the company.

The company had announced in early December 2019 that it will be shutting down. After the announcement of its
