

Choose the Job YOU SHOULD BE SKILLED For in 2020

Even as India's colleges and technical institutes churn out graduates by the hundreds, they often lack the requisite skills. Hence, many of them remain jobless and, often, very highly qualified people opt for menial jobs. We have heard the government reiterate the need for 'Skilling India'. This article is an attempt to highlight the lucrative jobs in the IT industry along with the skills needed for them.

The Indian software industry is quite mature compared to various other countries. We cater to not only a thriving and challenging domestic market but also the global market. And as the needs of the market evolve, the various job roles have also been changing from time to time. This article highlights the major job roles that are in demand in 2019 in the IT industry.

1. Data scientists

Everyone knows about the most sought after job of the 21st century. The demand for data scientists in India is quite high and there is a lack of skilled resources to fill in the vacancies locally. According to an article published in the *Economic Times*, the demand for data scientists rose by 417 per cent in 2018. This means that such jobs are highly available and also pay well – excellent from a

professional point of view. If someone wants to build a career in data science in India, then this is the right time to pick up the necessary skills for the job. The required skills include one of the programming languages such as Python, R or SAS; knowledge of SQL, statistics, Big Data; and above all, a deep curiosity to research data. The median salary in India is around ₹ 1.15 million (11.5 lakhs) per annum.
