

Listed below are some of the leading free platforms that offer cloud storage with dynamic security.

Syncthing

URL: <https://syncthing.net/>

The Syncthing platform provides security and integrity of data resources, along with recognising and mapping the devices so that each access can be identified.

The admin GUI panel of Syncthing is available at <http://localhost:8384>, using which browser based access is available. Its features include:

- Web based GUI and dashboard
- Security against data loss
- Security against unauthorised access and attackers
- Portable and compatible with multiple operating systems (Windows, FreeBSD, MacOS X, Linux and OpenBSD)
- No need for specific configurations or IP addresses
- High-performance dynamic synchronisation with security
- Private, authenticated and encrypted for secured storage and backup
- Cross-platform with GTK
- Smartphone compatible with mobile app

iDrive

URL: <https://www.idrive.com/>

Its salient features are:

- Backup of all the devices in a single platform and dashboard
- Online file sync with a high degree of security and integrity
- Regular backup and recovery with minimum resource usage
- Snapshots and version control
- Disk image backup for multiple files, folders and programs
- Continuous and high-availability data protection
- Retrieval of data with advanced search features
- Dynamic archiving and recovery in secured mode
