

A Guide to Real-time Data Extraction from the Cloud

Web scraping, also called Web harvesting or Web data extraction, is essentially the process of extracting copious amounts of data from websites and saving it to a local machine as a file or a database. Web scraping has become an important tool in commerce, consumer research, crime detection and prevention, sentiment mining, and even in politics.

Real-time data extraction and analytics is one of the key domains in a range of applications including sentiment data analytics, criminal data investigation, cyber patrolling, emotion mining, market research and many others. This approach is also known as Web scraping and is widely used in predictive mining and knowledge discovery in real-time, so that the actual data about the specific person or object can be recognised from social media. A similar type of implementation is done by political parties to get citizen reviews about the party, with the aim to increase the probabilities of winning the elections. Such approaches are also used by corporate giants to get feedback about their products from the general public.

Data is extracted in real-time from social media and online portals, from which user reviews are extracted to check the opinion of people about

Table 1: Web scraping tools

Web scraping tool	URL
Beautiful Soup	https://www.crummy.com/software/BeautifulSoup/
Octoparse	https://www.octoparse.com/
Import.io	https://import.io
Dexi.io	https://dexi.io/
Scrapy	https://scrapy.org
Scrape.it	https://scrape.it/
ScrapingHub	https://scrapinghub.com/open-source
MechanicalSoup	https://mechanicalsoup.readthedocs.io/
Jaunt	https://jaunt-api.com/
Jauntium	https://jauntium.com/
Storm Crawler	http://stormcrawler.net/
Norconex	https://www.norconex.com/
Pyspider	https://github.com/binux/pyspider
Demiurge	https://github.com/matiasb/demiurge
Feedparser	https://github.com/kurtmckee/feedparser
RoboBrowser	https://github.com/jmcarp/robobrowser
Cola	https://github.com/chineking/cola
Lassie	https://github.com/michaelhelmick/lassie
Apify	https://www.apify.com/docs/sdk
Kimurai	https://github.com/vifreefly/kimuraframework
