

Growth of Edge and Cloud Computing in Business

With the introduction of edge computing and cloud computing, companies have reached a different level in terms of growth and productivity. These technologies provide several benefits such as cost reduction, data analysis, enhanced security and more, which in turn has led to development of businesses all over the globe.

Companies are moving their workload to the cloud because of security, scalability, and flexibility.

By the end of 2022, the overall market of edge computing is speculated to reach 13 billion dollars globally as stated by Gartner. This is going to be possible because companies these days are extremely tech-savvy and are now truly understanding the advantages of cloud computing. Also, the negative perceptions are wiping out; the majority

of companies are agreeing to test their heavy workloads in the cloud and some are even moving entirely to cloud computing. By 2025, it is speculated that around 75 per cent of data would be processed from the cloud, while the revenue of the global public cloud is expected to reach 17 per cent by the end of 2020, as per Gartner.

The new research report by Grand View Research, Inc. mentions that, with a CAGR of 37.4 per cent during the speculated period, the

market volume of edge computing is expected to reach 43.4 billion dollars by 2027 globally, where 5G and IoT would play an extremely decisive role. Various apps that will use 5G will completely change the working pattern of traffic demand and uplift more sophisticated technology for telecom providers.

MarketsandMarkets, the platform offering market research reports, claims that by 2022 overall edge computing market would be valued
