

- BeeWare provides specialised tools such as Toga and Briefcase, which perform a specific task for which they are developed in an efficient manner.
- Kivy has been available since 2011, while BeeWare is relatively more recent. The latter is still evolving and has great potential in becoming the tool to build native apps in Python.

Both Kivy and BeeWare enable cross-platform app development in Python. Based on the nature of the application, either one of these tools can be selected. If you are a

Python developer, give both Kivy and BeeWare a try to get the feel of cross-platform app development. In the coming years, we can expect

these tools to evolve further and make Python based cross-platform development simpler and effective. **END**
