

Save this file and exit. After this, execute the following:

```
su - // Switch To Root User
ln -s /etc/nginx/sites-available/osfy-test.linuxgeek.in /etc/nginx/sites-enabled/
nginx -t //To check weather configuration is right or not
nginx -s reload //To reload the Nginx service
```

You can change in nginx configuration as per your requirements.

Section 9 – Installation and Configuration of the Certbot

To enable HTTPS on your website, you need to get a certificate (a type of file) from a certificate authority (CA). Let's encrypt a CA. -> To enable HTTPS on your website, you need to get a certificate (a type of file) from a certificate authority (CA). Let's encrypt is a certificate authority(CA).

To install, let's add a repository.

```
sudo add-apt-repository ppa:certbot/certbot
sudo apt-get update
sudo apt-get install python-certbot-nginx
```

To generate the SSL certificate, execute the following commands.

Note: Before executing these commands, you should point the DNS to the server IP. Only then will it generate the SSL.

```
certbot --nginx
//To configure SSL Certificate
```

Enter email address (used for urgent renewal and security notices) (Enter 'c' to cancel): me@linuxgeek.in

You must agree to the following prompts in order to register with the ACME server at <https://acme-v02.api.letsencrypt.org/directory>.

```
(A)gree/(C)ancel: A
```

Next, respond to the following: "We'd like to send you an email about our work on encrypting the Web, EFF news, campaigns and ways to support digital freedom."

```
(Y)es/(N)o: N
```

Which names would you like to activate HTTPS for?

```
1: osfy-test.linuxgeek.in
```

Select the appropriate numbers separated by commas and/or spaces, or leave the input blank to select all options shown (press 'c' to cancel): 1

Please choose whether or not to redirect HTTP traffic to HTTPS, removing HTTP access:

```
1: No redirect - Make no further
```

changes to the Web server configuration.

```
2: Redirect - Redirect all requests to secure HTTPS access.
```

Select the appropriate number [1-2] then press *enter* (press 'c' to cancel): 2

Congratulations! You have successfully enabled <https://osfy-test.linuxgeek.in>.

Test your configuration at <https://www.ssllabs.com/ssltest/analyze.html?d=osfy-test.linuxgeek.in>.

```
sudo nginx -t
//To check whether configuration is right or not
sudo nginx -s reload
```

```
//To reload the Nginx service
```

Section 10 - Checking if all services are running

To run the WordPress site in the

Welcome

Welcome to the famous five-minute WordPress installation process! Just fill in the information below and you'll be on your way to using the most extendable and powerful personal publishing platform in the world.

Information needed

Please provide the following information. Don't worry, you can always change these settings later.

Site Title: OSFY-Test

Username: linuxgeek
Usernames can have only alphanumeric characters, spaces, underscores, hyphens, periods, and the @ symbol.

Password: EjlvpttC9sNd5)LGo
Strong

Important: You will need this password to log in. Please store it in a secure location.

Your Email: me@linuxgeek.in
Double-check your email address before continuing.

Search Engine Visibility: ☒ Discourage search engines from indexing this site
It is up to search engines to honor this request.
