WEB AND MOBILE APP DEVELOPMENT

Everything You Wanted to Know About PWAs

This article is the first of a two-part series that covers all the basics of progressive Web apps (PWAs). The next part will take us further down the road to actually building a PWA.

Why Progressive Web Applications are so Popular Today

A progressive Web app (PWA) is one that uses modern Web capabilities to deliver an app-like experience to users. It is built using common Web technologies like HTML, CSS and JavaScript, and is designed to work on any device that has a standards-compliant browser. PWAs are browser- and platform-agnostic.

Building a Progressive Web App Using Vue.js

Progressive Web apps have the ability to run natively on your mobile device or PC. Vue.js is a free open source front-end framework with which you can deploy a progressive single-page Web application easily.

Build a To-do List App Using the Ionic 4 Framework

This tutorial will help you build a to-do list mobile application, using the Ionic 4 Framework, within a few minutes.

How Blockchain Technology can Benefit Web and Mobile Applications

Blockchain technology has been widely adopted because of

its unique features of privacy, security, immutability and integrity, among many others. Combining it with modern Web and mobile technologies can bring about a remarkable change in the management and functioning of various civic entities. Effectively implemented, this can save billions of dollars.
