

Building a Progressive Web App Using Vue.js

Progressive Web apps have the ability to run natively on your mobile device or PC. Vue.js is a free open source front-end framework with which you can deploy a progressive single-page Web application easily. This article demonstrates how to create a simple PWA using Vue.js.

A progressive Web app (PWA) has the ability to run natively on your browser without the support of an Internet connection. Simply put, it can function as an offline app within your mobile phone or PC browser.

Vue.js is a progressive front-end Web framework for building elegant user interfaces. What makes it really useful is its ability to adapt to existing

systems. Vue.js has a plug-and-play type of design. It is also very useful when it comes to building single-page Web applications from the ground up. Provided with a powerful command line interface (Vue CLI), Vue.js is easy to install and fast to deploy.

PWAs have been all the rage in the market recently, with more and more companies switching to them as a great alternative (or an add-on) to their existing

mobile apps. In this article, we intend to create a simple PWA using Vue.js

Setting up Vue.js

Install Node.js on your computer by visiting the official website.

The Node.js package comes with a package manager (*npm*). After installation, you should have *npm* automatically installed in your computer. You can check if Node and *npm* have been installed correctly by using the following code:

```
node -v
npm -v
```

Next, install the Vue CLI, as follows:

```
npm install -g @vue/cli
```

Note: Since we are installing the Vue CLI globally, you may require administrator privileges. If you get an error, try executing the above code with a `sudo` keyword.

```
[Desktop] $ mkdir my-pwa-app
[Desktop] $ cd my-pwa-app
[my-pwa-app] $ vue init pwa my-pwa-app

[?] Project name my-pwa-app
[?] Project short name: fewer than 12 characters to not be truncated on homescreen
[s (default: same as name)] pwa
[?] Project description A Vue.js project
[?] Author Shah Quadri <30766213+shah78677@users.noreply.github.com>
[?] Vue build standalone
[?] Install vue-router? Yes
[?] Use ESLint to lint your code? No
[?] Setup unit tests with Karma + Mocha? No
[?] Setup e2e tests with Nightwatch? No

vue-cli · Generated "my-pwa-app".

To get started:

  cd my-pwa-app
  npm install
  npm run dev

Documentation can be found at https://vuejs-templates.github.io/webpack
my-pwa-app $
```

Figure 1: Initialising a PWA using Vue

```
sudo npm install -g @vue/cli
```
