

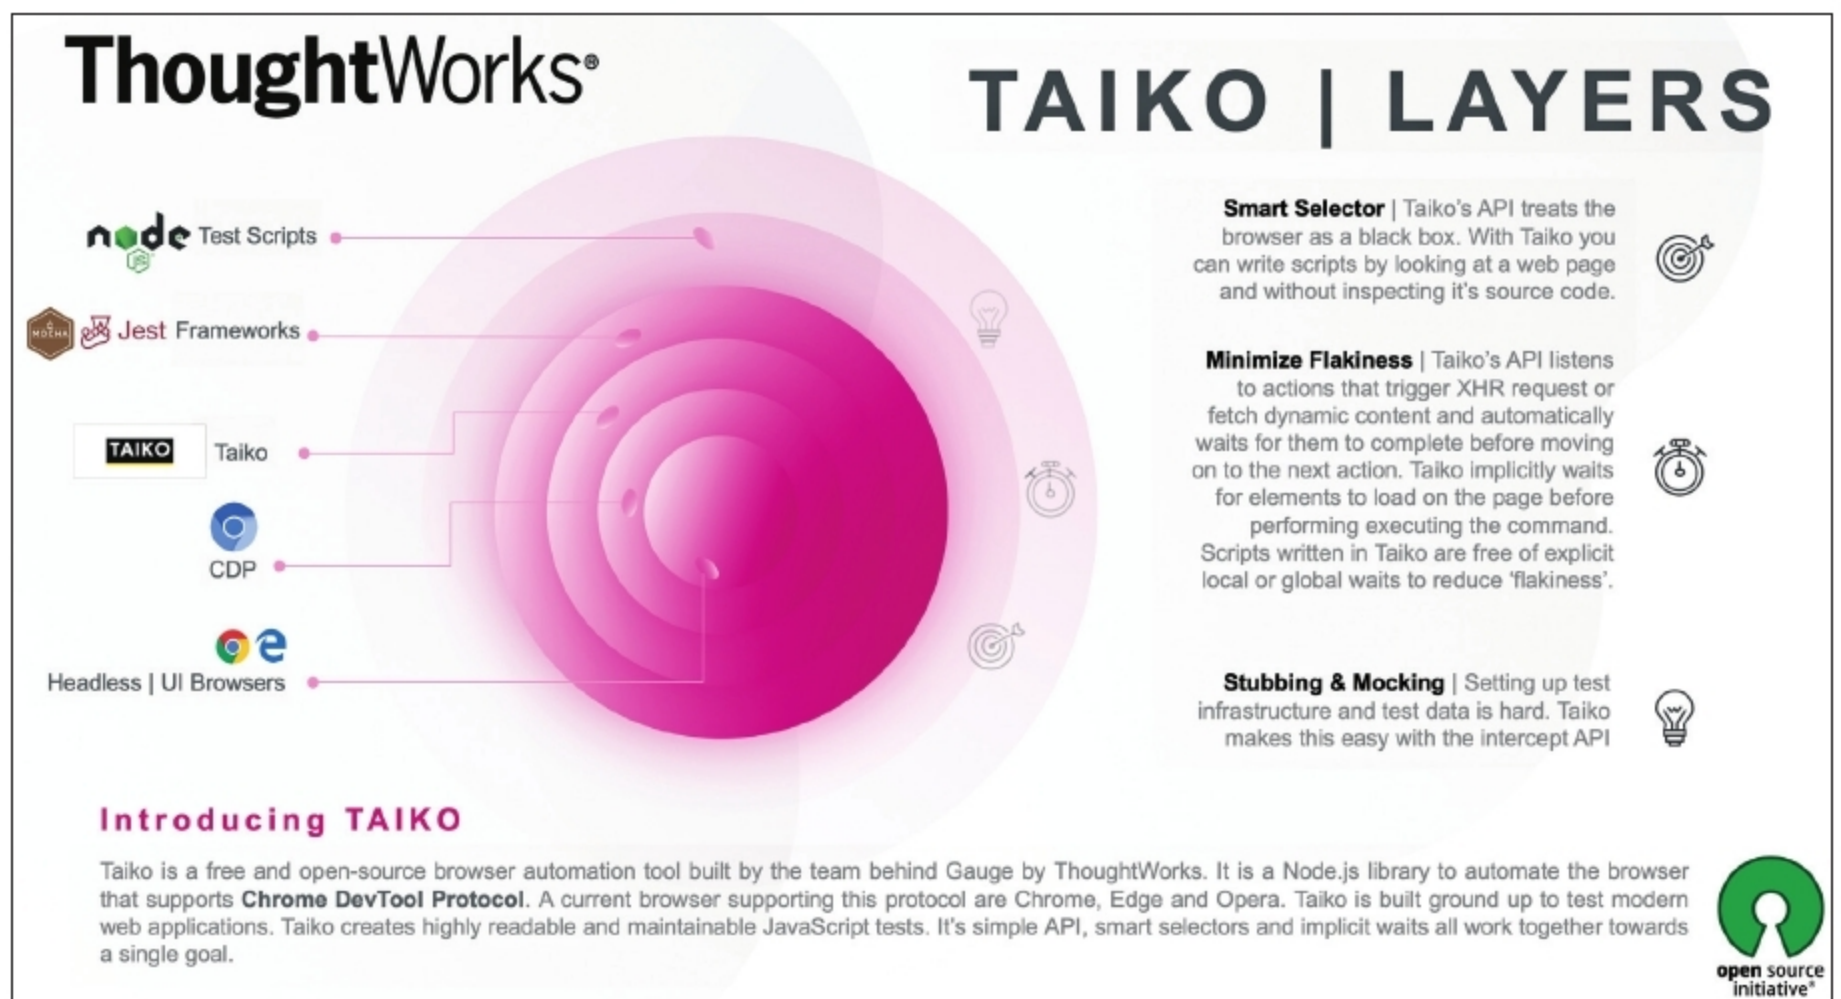

Figure 3: The Taiko framework and its features

```
await write(textBox("first name",
toLeftOf("last name", above("user
name"))))
await click(link("Block",
toRightOf("name"))
await click(link("email",
below("name"))
await click(link("Block", near("name",
{offset:50})))
```

Other Taiko superpowers

Taiko directly interacts with the browser and can easily use all the latter's features in tests. These include the Intercept API and mock response, network emulation, geolocation and service workers.

Offline support

Offline support is very critical for certain types of applications. Some features rely on the offline status—for example, if you want a red banner to show up when the application is accessed in offline mode to stop your user from purchasing a product.

This can be tested either by turning off the network or using Chrome

```
Browser actions
  openBrowser, closeBrowser, client, switchTo, intercept, emulateNetwork, emulateDevice,
  setViewport, openTab, closeTab, overridePermissions, clearPermissionOverrides, setCookie,
  clearBrowserCookies, deleteCookies, getCookies, setLocation, clearIntercept

Page actions
  goto, reload, goBack, goForward, currentURL, title, click, doubleClick, rightClick,
  dragAndDrop, hover, focus, write, clear, attach, press, highlight, mouseAction, scrollTo,
  scrollRight, scrollLeft, scrollUp, scrollDown, screenshot, tap, emulateTimezone

Selectors
  $, image, link, listItem, button, inputField, fileField, textBox, textField, comboBox,
  dropDown, checkBox, radioButton, text

Proximity selectors
  toLeftOf, toRightOf, above, below, near

Events
  alert, prompt, confirm, beforeunload

Helpers
  evaluate, intervalSecs, timeoutSecs, to, into, accept, dismiss, setConfig, waitFor

Run `.api <name>` for more info on a specific function. For Example: `.api click`.
Complete documentation is available at http://taiko.gauge.org.
```

Figure 4: Taiko commands

DevTools and emulating the offline mode. The same can also be done in Taiko, with ease:

```
await emulateNetwork("offline")
```

A few other network modes that

Taiko supports are GPRS, Regular2G, Good2G, Good3G, Regular3G, Regular4G, DSL, WiFi, Offline.

Geolocation

If you have an application with global users and have a map to show where
