

Solo.io open sources Mesh Hub

Idit Levine, founder and CEO of Solo.io said, “This announcement brings our vision to reality. Service mesh offers security, observability and control benefits, but comes with significant complexity. The Service Mesh Hub abstracts this complexity away from the users, allowing them to quickly adopt the technologies they need. We are introducing the Service Mesh Hub as an open source project, hoping to build a community that will help accelerate service mesh adoption and facilitate collaboration, and to make multi-cluster and multi-mesh a reality for everyone who needs it.”

Traction on Demand and Thrive Health release open source healthcare app to fight COVID-19

The Traction Thrive Critical Care Resource Management application has been built on the Salesforce platform. It has been designed to view, track and allocate critical healthcare personnel, personal protective equipment, ventilator availability, and other critical supplies in real-time.

The Linux Foundation and the Fintech Open Source Foundation (FINOS) have announced that FINOS will become a Linux Foundation organisation. FINOS is a non-profit that aims to accelerate adoption of open source software, standards and best practices in financial services. The Linux Foundation will acquire the FINOS operating assets.

The Linux Foundation will position FINOS as its umbrella project. Through it, it will advance further development of open source and standards within the financial services industry. The FINOS team, led by executive director Gabriele Columbro, will join the Linux Foundation. Columbro will continue in his role. FINOS presently has more

than 30 member organisations and over 300 contributors. Zemlin added, “We look forward to working with Gab, the FINOS team and its members as we together chart the future of global financial services collaboration.”
