

DEVOPS IS TAKING OVER THE WORLD

Ten years ago, DevOps wasn't a thing. Now, if you're not adopting DevOps practices, you're in danger of being left behind. Over the last decade, JFrog's liquid software vision is helping companies around the world adopt, mature and evolve their CI/CD pipelines. This is because DevOps powers the software that powers the world.

The company's mission

JFrog is on a mission to enable continuous updates through liquid software, empowering developers to code high quality applications that securely flow to end users with zero downtime. JFrog created Artifactory, the heart of the end-to-end universal DevOps platform for automating, managing, securing, distributing and monitoring all types of technologies. As the leading universal, highly available enterprise DevOps solution, this JFrog platform empowers customers with trusted and expedited software releases from code-to-production. Trusted by more than 5,500 customers, the world's top brands, such as Amazon, Facebook, Google, Netflix, Uber, VMware and Spotify depend on JFrog to manage their binaries for their mission-critical applications.

'Liquid software'

In its truest form, liquid software refers to software that is continuously being updated, from code to the edge – seamlessly, securely and with no downtime. The term implies no versions nor any big buttons, but instead, just flowing updates that seamlessly power all the devices and applications around you. Why? To an edge device, browser or end user, versions don't really have to matter. What version of Facebook is on your phone? You don't care – until it's time to update it, when you get annoyed. What is the current version of the operating system in your laptop? You might know, but again, you don't really care as long as it's up to date. How about your version of Microsoft products? Or the version of your favourite website? You don't care. You want it to work, and the more transparently it does, the better. In fact, you'd prefer it if software would just update on its own and you didn't even have to click a button. JFrog is powering that change.

A fully automated CI/CD pipeline

The idea of automating everything in the CI/CD pipeline is exciting and groundbreaking. Imagine a single platform on which you could automate every step – from code into production. This is not a pipe dream. It's the vision behind the concept of liquid software – a world without versions. The company is excited about it and is eager to share the possibilities with its customers.

Giving back

JFrog's roots are in the many open source communities that are mainstays today. In addition to the many community

contributions through global standards organisations, JFrog is proud to give enterprise-grade tools away for open source committers, as well as provide free versions of products for specific package types. There are 'developer-first' companies that like to talk about their target market. JFrog is a developer company built by, and for, developers. We are happy to support you.

JFrog is now all over the world

JFrog has over nine global offices, including one in India, where it has a rapidly-growing team with R&D and support functions. *And, it is hiring fast!* The company invites open source enthusiasts to join the liquid software revolution.

A proud sponsor of Open Source India

As the sponsor of the DevOps track at the Open Source India expo, the company wants to ensure that visitors see and have access to all the cool tools and methods available. In fact, the company has planned a couple of amazing experiences that visitors can enjoy.

- 1) Stop by the booth where the latest versions of JFrog will be demonstrated, enabling liquid software. Company personnel are excited to show visitors what's possible.
- 2) Join **Stephen Chin**, world-renowned speaker and night-hacker who will be giving a talk on the future of liquid software. Chin spent many years at Sun and Oracle, running teams of developer advocates. He's a developer and advocate for your communities, and he's excited to join you.

The bottomline

JFrog is proud to be a developer company, serving its customers' needs as well as the needs of the OSS communities around the globe with DevOps, DevSecOps and pipeline automation solutions that are changing how the world does business.

JFrog open source products are available as on-premise versions, and on the cloud on AWS, Microsoft Azure and Google Cloud. JFrog is a privately held company with offices across North America, Europe and Asia.
