

# Bonita Studio CE: A Complete Free Software Solution for Business Process Management

Bonita Studio is the graphics design interface of Bonita Open Solution. With Bonita Studio, one can draw business processes step by step on the whiteboard, using the design and context palettes. The interface has a toolbar, with icons representing shortcuts to features, and functions available for process design and configuration.

Let us first look into what BPMN (Business Process Model and Notation) is and why it matters. BPMN is a standard for business process collaboration and for IT development that is maintained by OMG (Object Management Group), and is also ratified as ISO 19510 compliant. The latest version of it is BPMN 2.0.2, which was published in January 2014.

It is a shared common language (used not just for business and IT).

BPM (Business Process Management) is the discipline of managing processes in order to improve business performance outcomes. A business process model is a representation of an organisation's processes. A model can be analysed and improved.

As mentioned earlier, the N in BPMN stands for 'notation' and consists of

graphic symbols to represent the action, flow or behaviour of a process.

BPMN provides a notation that can be readily understandable by all users:

- The business analyst who models the process conceptually
- The technical developers responsible for implementing the technology for the process and
- Those who will manage and monitor the process.
