

SUSE enhances delivery of modern containerised and cloud native applications

SUSE has announced updates to its application delivery solutions that help customers accelerate the production of modern containerised and cloud native applications. These updates advance SUSE's delivery and support of solutions to create, deploy and manage workloads anywhere – on premise, hybrid and multi-cloud – with good service, value and flexibility.

SUSE application delivery solutions include SUSE's CaaS Platform, an enterprise-ready container management solution based on Kubernetes, and SUSE's Cloud Application Platform, which runs on top of Kubernetes and helps enterprises achieve their cloud native application delivery goals quickly and cost effectively. DevOps teams can take advantage of the first solution to manage a wide range of workloads, including traditional, transitional and cloud native workloads. The second solution adds ready-made workflow automation that enables DevOps teams to deliver cloud native applications rapidly, at scale and in multi-cloud environments. SUSE's solutions complement each other and can be used effectively together and separately.

SUSE CaaS Platform 4 elevates Kubernetes platform operations with enhancements that strengthen application security, making it easier to keep pace with technology advancements and expand platform scalability options. The solution integrates the latest releases of Kubernetes and SUSE Linux Enterprise.

SUSE Cloud Application Platform 1.5, the latest version of SUSE's modern application delivery platform for Kubernetes, reduces management complexity with new user interface enhancements. It also increases IT efficiency by providing a faster time to value with a simple and more predictable installation experience on hosted Kubernetes services.

"SUSE's modern application delivery solutions are easy for development and DevOps teams to use and for IT to operate," said Thomas Di Giacomo, SUSE president of engineering, product and innovation. "Our support of Cilium-based networking puts our customers ahead of those using other commercially supported Kubernetes solutions and is an example of how we're powering digital transformation with agile open source solutions that enable enterprises to continually innovate, compete and grow," Di Giacomo noted.
