

Smart cities and advanced wireless scenarios using IoT

There are a number of applications and scenarios in which IoT technologies deliver higher levels of efficiency and performance.

Listed below are the application domains.

Smart cities

- Smart parking
- Smart roads
- Smart toll plazas
- Smart traffic lights
- Traffic congestion

Environment protection and sustainable resources

- Forest fire detection
- Air pollution
- Earthquake detection
- Sea based disaster prediction
- Snow level monitoring
- Avalanche and landslide prevention

Smart homes

- Wearables
- Smart appliances
- Devices that monitor the elderly

Industrial applications

- Smart grids
- Machine-to-machine communication
- Machine auto-diagnosis
- Indoor air quality
- Industrial disaster prediction
- Temperature monitoring
- Ozone presence
- Indoor location

Smart water

- Potable water monitoring
- Chemical leakage detection
- Remote swimming pool analysis
- Pollution level analysis
- Water leakages
- River floods

Retail

- Supply chain control
- Smart product management
- Intelligent shopping applications
- Industrial control

Digital health and telemedicine

- Patient monitoring
- Medical fridges
- Ultraviolet radiation
- Telemedicine
- Digitally connected healthcare

Smart agriculture

- Smart farming
- Agriculture robots (agribots)
- Soil quality measurement
- Green houses
