

GitHub India: The Focus is on the Community, Commerce and Country

As per the GitHub 'State of the Octoverse' report, over 65M+ million developers around the world were building software on GitHub in 2020. More than 2.2 billion contributions were added in the last 12 months, and over 200M+ million new repositories were created in that year. According to **Maneesh Sharma, country manager at GitHub**, the focus in India is on the 3Cs – community, commerce, and country.

GitHub announced three new programmes for developers, students and startups in India, named GitHub Open Source Grants, GitHub Externships and GitHub Accelerate, respectively, at the GitHub Satellite India virtual event held in March this year. Over 1.8 million new developers have joined GitHub in India over the past year, with the community in India now totalling 5.8 million developers. The number of contributions on the platform, such as issues and team discussions, increased by 75 per cent in India compared to about 40 per cent for the rest of the world over the past year.

Maneesh Sharma, country manager at GitHub, summarises what GitHub is trying to achieve in India into 3Cs — community, commerce and country. That, he says, is the strategy GitHub has for India.

To begin with, GitHub is working very closely with the open source community and trying ways to engage with it. He says, "I think there is tremendous tech talent in the country. We have a lot of participation from the open source community on developer projects. There is also focus on the startup ecosystem. All the programmes we are coming up with align with the community pillar."

The second C in the GitHub strategy is commerce. GitHub is engaging with enterprises as they undergo digital transformation. Sharma says, "We are working on how to support not only the tech companies but also the traditional businesses that are going into more tech and hiring software engineers."
