

Popular DevOps Certifications

We'll take a quick look at some of the major DevOps certifications from Microsoft Azure, AWS, Google, Red Hat, and IBM in part three of this series of articles on DevOps certifications.

DevOps, often known as DevSecOps, is no longer a special initiative, but rather a standard practice while giving service. The cloud and DevOps are emerging as saviours for enterprises in the current pandemic. Organisations are therefore looking for qualified people with experience in using cloud platforms and DevOps practices. They are, in fact, competing for qualified employees that understand the value of procedures and can work with a variety of tools and technology.

Certification in DevOps and the cloud is one way to showcase skills in a highly competitive market. Although knowledge is king and not a piece of paper, validation from a qualified authority gives you confidence and additional opportunities to shine in your organisation or on LinkedIn.

Most organisations require certifications as part of their annual appraisals too.

The eight certifications that are introduced in this article can be useful for different levels of skillsets.

Microsoft Certified: DevOps Engineer Expert

Microsoft Azure provides many services (IaaS, PaaS, SaaS) similar to AWS and the Google Cloud.

The Azure DevOps Engineer Expert certification provides a broad view of best practices for SDLC activities with diverse Azure DevOps and Microsoft Azure services for beginners, DevOps engineers, technical leads, technical architects, and managers.

Microsoft Certified: DevOps Engineer Expert

Candidates for the DevOps Engineer Expert certification should have subject matter expertise working with people, processes, and technologies to continuously deliver business value.

Responsibilities for this role include designing and implementing strategies for collaboration, code, infrastructure, source control, security, compliance, continuous integration, testing, delivery, monitoring, and feedback.

A candidate for this certification must be familiar with both Azure administration and development and must be expert in at least one of these areas.
