

The price of a BitCoin (BTC) was less than one US dollar around 10 years back when it was launched. Today, its price is more than US\$ 30,000. A few months ago, its price touched around US\$ 60,000, proving it is a very attractive form of investment.

The market capitalisation of cryptocurrencies is around 338 million US dollars, with 13,951 BitCoin ATMs located in different parts of the world, as per a report from Statista.

## Wallets and exchanges for cryptocurrencies

Currently, there are a number of exchanges in the world that offer platforms and wallets for buying and trading in cryptocurrencies. These include Web based environments as well as apps for Android, iPhone and other mobile phone platforms. Crypto users can buy and sell different currencies that are legal tender around the world with ease on these sites.

The major worldwide crypto exchanges in the world that provide wallets and Web platforms for cryptocurrency trading are listed in Table 1. In crypto exchanges, pairings refer to the pairs of cryptocurrencies that are used to buy and sell such coins.

In the crypto world, there are two types of exchanges and wallets — centralised and decentralised.

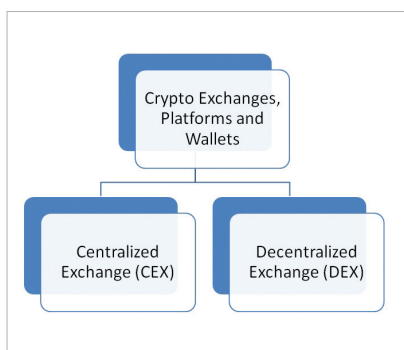

Figure 1: Crypto exchanges, platforms and wallets

Table 1: Top international exchanges and wallets

| Exchange            | Coins | Pairings |
|---------------------|-------|----------|
| Binance             | 316   | 1139     |
| Coinbase Exchange   | 73    | 224      |
| Bitfinex            | 138   | 319      |
| Kraken              | 70    | 354      |
| Binance US          | 52    | 108      |
| Gemini              | 44    | 63       |
| Crypto.com Exchange | 90    | 167      |
| Huobi Global        | 331   | 913      |
| OKEx                | 269   | 477      |
| P2PB2B              | 155   | 342      |

## Centralised exchanges and wallets

The centralised exchanges and wallets are owned by companies or corporate giants, which record the complete Know Your Customer (KYC) details either through video KYC or paper based KYC. Users can open accounts in these centralised exchanges and

then trade in any cryptocurrency. In centralised exchanges, trading is done through the local currency that is legal tender in that specific country — for example, the Indian rupee in India. KYC is done to avoid any type of money laundering activity.

Table 2 lists popular centralised exchanges in India and their URLs.

Table 2: Top centralised wallets and exchanges in India

| Exchange with wallet platform | URL                                             |
|-------------------------------|-------------------------------------------------|
| WazirX                        | <a href="https://wazirx.com">wazirx.com</a>     |
| Coinbase                      | <a href="https://coinbase.com">coinbase.com</a> |
| Zebpay                        | <a href="https://zebpay.com">zebpay.com</a>     |
| BuyUCoin                      | <a href="https://buyucoin.com">buyucoin.com</a> |
| CoinDCX                       | <a href="https://coindcx.com">coindcx.com</a>   |
| UnoCoin                       | <a href="https://unocoin.com">unocoin.com</a>   |
| Bitbns                        | <a href="https://bitbns.com">bitbns.com</a>     |
