

How Open Source is Helping to Build Smart Cities

The government of India introduced the National Smart Cities Mission in 2015 to develop smart cities pan-India, making them citizen friendly and sustainable. It included 100 cities in this mission, to begin with, with the deadline for completion of the projects set between 2019 and 2023.

But how can smart cities leverage open source technologies, and deploy 5G and IoT to accelerate innovation and reach the ambitious targets set under this mission? A panel discussion on the subject 'Deploying "5G, IoT and Edge Computing" technologies for SmartCity and Business Verticals using Open Source Platforms' among industry leaders at a Samsung IEEE event offered some answers.
