

Typeset: Taking the Drudgery Out of Formatting Academic Papers

Sometimes, adversity opens doors. This is exactly what happened in the case of 29-year-old Saikiran Chandha. He struggled to format his academic writing. If you have been in this field, you know that laying out your words on a page — in the format required — can sometimes be more stressful than writing down things and collating facts. But Chandha saw an opportunity when he ran into a wall. Over the past half a decade or less, he has built Typeset, a firm that is offering some promising solutions to academicians worldwide.

Typeset is a research writing platform that offers a “one-stop solution, simplifying the entire research workflow from discovery, writing and collaboration, to formatting, submission, and dissemination.” The company says this platform is being used by “1M+ researchers, 14K+ institutions, and deployed in around 175+ countries worldwide.”

Interestingly, Typeset’s work pushes for open access to journal articles. It also promotes awareness about OJS. Open Journal Systems (or OJS) is a powerful and versatile open source software application that makes it very easy to manage and publish online scholarly journals.

OJS has a lot to offer talent-rich, resource-poor regions like India, to let a thousand flowers bloom in the field of academic publishing.

First developed and released by the Public Knowledge Project 2001 to improve access to research, OJS is today the most widely used open source journal publishing platform worldwide. Over 25,000 journals use its software worldwide.

But coming back to Chandha. This is his story....

Saikiran Chandha started his company after graduating. But for a reason. He had struggled with the formatting of some of his own writing, which got rejected due to being improperly formatted.

In an interview to NASDAQ.com [<https://www.nasdaq.com/articles/saikiran-chandha-a-new-approach-to-scientific-publishing-accelerates-progress-2021-08-17>], he explains that his paper “was rejected for publishing because it didn’t meet my university’s formatting guidelines.” He found that many researchers face this problem.

And he told Fortune India [<https://www.fortuneindia.com/people/saikiran-chandha-the-young-visionary-is-redefining-the-realm-of-research-academia/105641>]: “My research was fresh and original, but the editing tools
