

```

tracker: Tracker,
domain: Dict[Text, Any]) ->
List[Dict[Text, Any]]:

roll = tracker.get_slot("rollnumber")
print("Rollno: ", roll)
if( roll ):
score = 98
roll = 100
else:
score = -1
roll = 0

result = "Fail"
if score >= 50:
result = "Pass"

dispatcher.utter_message(
response="utter_result",
score=score,
roll=roll,
result=result
)

```

Description

▪ nlu.yml

Sometimes, it can be hard to configure all the possible values. Regex comes to the rescue here. In this scenario, we can see Regex being used to identify the roll number.

▪ rules.yml

Rules are a type of training data used to train your assistant's dialogue management model. They describe short pieces of conversations that should always follow the same path. Forms are used to save the student's roll number. The most common conversation patterns are to collect a few pieces of information from a user in order to do something (book a restaurant, call an API, search a database, etc).

Note: Don't overuse rules. Rules are great to handle small specific conversation patterns, but unlike stories, they don't have the power to generalise to unseen conversation paths.

▪ domain.yml

Slots are your bot's memory. They act as a key-value store, which can be used to store information the user provided

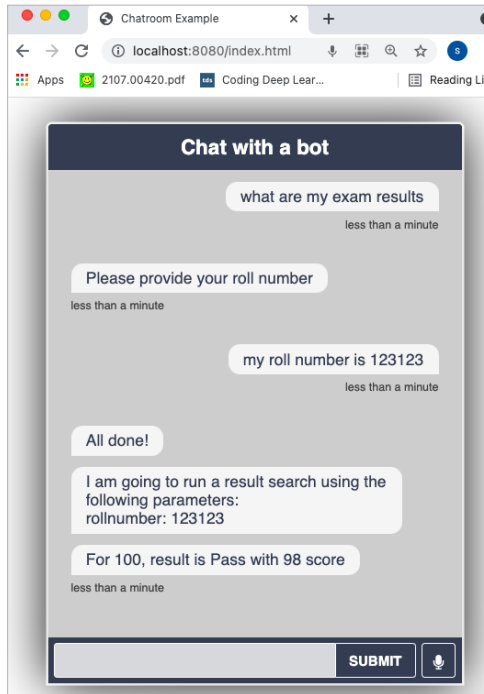

Figure 5: Scenario 3 -- chat with bot, using slots

(e.g., their home city) as well as information gathered about the outside world (e.g., the result of a database query). Here we have saved the student's roll number in a slot and it is extracted from the entity.

The output for this scenario in UI is seen in Figure 5.

Scenario 4

- Fee enquiry
- Provide if only roll number is provided
- Else ask for the roll number and then provide the fee structure

nlu.yml

```

- regex: rollnumber
examples: |
- \d{10,30}

- intent: get_roll_number

```

```

examples: |
- my roll number is [1234567891](rollnumber)
- This is my roll number [1234567891](rollnumber)
- [1234567891](rollnumber)

```

```

- intent: fees_enquiry
examples: |
- may I know the fees structure
- how much fees do I need to pay
- do I have any pending fees to be paid

```

stories.yml

```

- story: Ask for rollnumber and say fees
steps:
- intent: fees_enquiry
- slot_was_set:
  - rollnumber_provided: null
- action: utter_ask_rollnumber
- intent: get_roll_number
- slot_was_set:
  - rollnumber_provided: true
- action: action_save_roll_number
- action: action_fees_details

```

rules.yml

```

- rule: Only say `fees` if the user provided a rollnumber
condition:
- slot_was_set:

```
