

Figure 6: Scenario 4 — chat with bot, using slots and conditions

```
- department: Civil
role: from
- action: utter_ask_about_experience

- story: The student is going to another department
steps:
- intent: department_going_to_change
entities:
- department: Computer
role: to
- action: utter_wishLuck
```

domain.yml

```
intents:
- department_have_been_changed
- department_going_to_change

responses:
utter_ask_about_experience:
- text: "How was your experience with the department."

utter_wishLuck:
- text: "Wish you best luck in the new department."
```

Figure 7: Scenario 5 — chat with bot, using roles

Description

■ nlu.yml

Here we are using the features *Entity Roles* and *Groups*, where we need to specify the list that the roles and groups of an entity can belong to.

Figure 7 gives the output in UI.

Rasa can help us build a chatbot for use cases quickly. The scenarios given here are pretty basic, and there is a lot more that Rasa has to offer. **END** 🐧
