

language processing tasks smoothly

- Includes implementation of the restricted Boltzmann machine, deep belief networks, deep autoencoder, recursive neural tensor network, stacked denoising autoencoder, word2vec, doc2vec, and GloVe.

9. Darknet

Darknet is an open source neural network framework primarily released in 2013. For more details, visit pjreddie.com/darknet/.

Features

- The framework is written in C and CUDA to provide good performance

- Fast and easy installation
- Supports CPU and GPU computations
- Facilitates image classification, time series prediction, natural language processing, etc

10. PlaidML

PlaidML is an open source tensor compiler for the machine learning framework, released on October 20, 2017. For more details, visit [github](https://github.com/plaidml).

com/plaidml or www.intel.com/content/www/us/en/artificial-intelligence/plaidml.html.

Features

- Added nGraph compatibility support for new GPUs and platforms
- Offers modular hardware support from embedded to new processors
- Works on major operating systems such as Linux, macOS and Windows 

By: Geetali Saha and Dr. Safvan Vahora

Geetali Saha is a member of the faculty of the Department of Electronics and Communication, G.H. Patel College of Engineering and Technology (GCET), Gujarat.

Dr. Safvan Vahora is Assistant Professor, Government Engineering College, Modasa, Gujarat.
