

Installing and Using RethinkDB on Ubuntu

Here's a short tutorial on how to install and use RethinkDB, the popular NoSQL database, on Ubuntu machines.

RethinkDB is an open source, free, distributed, and document-based database server. This NoSQL database has been developed by Rethink, and can store JSON files with schemas that are dynamic. More importantly, real-time updates for query results can be pushed for applications to use. Since it is a distributed database, it is highly scalable. It has many automatic functions, making it a highly available database. As it is a popular database today, it is important that we learn how to use it.

Let's start with how we can install and use it on our Ubuntu machines. First, to add the packages required to install RethinkDB to our updates, we need to run the following command, as shown in Figure 1.

```
source /etc/lsb-release && echo "
deb https://download.rethinkdb.com/repository/ubuntu-$DISTRIB_CODENAME $
DISTRIB_CODENAME main" | sudo tee /
etc/apt/sources.list.d/rethinkdb.list
```

The following command adds it to our repositories (Figure 2):

```
jishnusaaurav@jishnusaaurav-IdeaPad-L340-15IRH-Gaming:~$ source /etc/lsb-release &
& echo "deb https://download.rethinkdb.com/repository/ubuntu-$DISTRIB_CODENAME $
DISTRIB_CODENAME main" | sudo tee /etc/apt/sources.list.d/rethinkdb.list
deb https://download.rethinkdb.com/repository/ubuntu-bionic bionic main
jishnusaaurav@jishnusaaurav-IdeaPad-L340-15IRH-Gaming:~$
```

Figure 1: Adding the packages to updates

```
jishnusaaurav@jishnusaaurav-IdeaPad-L340-15IRH-Gaming:~$ wget -qO- https://downloa
d.rethinkdb.com/repository/raw/pubkey.gpg | sudo apt-key add -
[sudo] password for jishnusaaurav:
OK
jishnusaaurav@jishnusaaurav-IdeaPad-L340-15IRH-Gaming:~$
```

Figure 2: Adding RethinkDB to our repositories

```
jishnusaaurav@jishnusaaurav-IdeaPad-L340-15IRH-Gaming:~$ sudo apt update
[sudo] password for jishnusaaurav:
