

The screenshot shows the Balena Cloud dashboard for a device named 'cool-mist'. The device is a Raspberry Pi 4 (using 64bit OS) and is currently updating. The dashboard displays various metrics and logs.

Device Information:

- NAME: cool-mist
- STATUS: Updating
- UUID: c342f55
- TYPE: Raspberry Pi 4 (using 64bit OS)

Resources:

- CPU: ~27%
- Temperature: ~43C
- Memory: 190 MB/956 MB
- Storage: 79 MB/13.4 GB

Logs:

```

: "1", "SUPERVISOR_DELTA_VERSION": "3" }
Supervisor starting
Creating network 'default'
Supervisor starting
Creating volume 'resin-data'
Downloading image 'registry2.balena-cloud.com/v2/38f4d79bc571a93226e78923787e068c@sha256:fdef26594953ca3c9a1d6345d963e93f56f7fdec757ba737c9c937f17adf1b3'
  
```

Services:

Service	Status	Release
main	Downloading 43%	dff20b4

Figure 7: After a successful build, images are made available to devices for update

The screenshot shows the 'Welcome to balena!' page, which provides a guide for users who have deployed code to their device. The page includes links to documentation, project ideas, and additional help.

Welcome to balena!

Now that you've deployed code to your device, explore the resources below to continue on your journey!

Read our documentation

- Learn how balena works behind the scenes
- Run multiple containers in your application
- Fast development with local development mode
- Deploy device configurations across your fleet
- And much more!

[Explore the balena documentation](#)

Discover more balena project ideas

Find inspiration for what to build next, deploy another cool project, or join your device to an open fleet!
