

```

    verbatimTextOutput("summary"),
    # Output: HTML table with requested number of
observations ----
    tableOutput("view")
  )
}
# Define server logic to summarize and view selected dataset
----
server <- function(input, output) {
  # Return the requested dataset ----
  datasetInput <- reactive({
    switch(input$dataset,
      "rock" = rock,
      "pressure" = pressure,
      "cars" = cars)
  })
  # Generate a summary of the dataset ----
  output$summary <- renderPrint({
    dataset <- datasetInput()
    summary(dataset)
  })
  # Show the first "n" observations ----
  output$view <- renderTable({

```

```

    head(datasetInput(), n = input$nobs)
  })
}
# Create Shiny app ----
shinyApp(ui = ui, server = server)

```

It is recommended to go through the Shiny tutorial videos and the code examples to learn how to best use Shiny for your data sets.

OSFY Magazine Attractions During 2021-22

Month	Theme
March 2021	AI, Deep learning and Machine Learning
April 2021	DevOps Special
June 2021	Cyberscurity, Open Source Firewall and Network security and Monitoring
July 2021	Mobile/Web App Development and Optimisation
August 2021	Blockchain and Open Source
September 2021	Data Management, Storage and Backup
October 2021	Cloud Special: BigData, Hadoop, PaaS, SaaS, IaaS and Cloud, Automation in Cloud
November 2021	Open Source on Windows
December 2021	Database management and Optimisation
January 2022	Open Source and IoT and Edge
February 2022	Alternatives: Best in the world of Open Source (Tools and Services)
