

Appwrite creates first-of-its-kind fund to support maintainers

Appwrite, an open source Backend-as-a-Service (BaaS) platform for Web, mobile, and Flutter developers, has announced the Open Source Software Fund (OSS Fund), which will award US\$ 50,000 in its first year to open source maintainers whose projects lay the groundwork for today's digital infrastructure but aren't being compensated for it.

Appwrite's yearly OSS Fund will help meet the industry's need to assist open source maintainers, promote technology innovation, and create awareness for a variety of open source development solutions. Each year, the fund amount will be reviewed to ensure that it continues to meet the community's needs. The application period is currently open, and applications will be accepted on an annual basis. The Appwrite Developer Relations team will choose the recipients (<https://appwrite.io/oss-fund>).

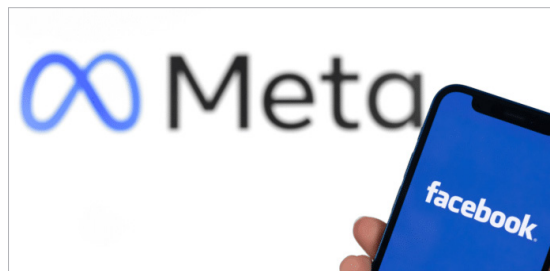

"I know what it's like to spend long hours in front of your computer, putting your blood, sweat and tears into something you love and that is also benefiting thousands or even millions of people around the world," said Eldad Fux, founder & CEO of Appwrite. "I've known all along that we would use some of Appwrite's success and investment to support other developers and maintainers just like me, to give back in order to look forward. We hope our contribution can make a difference."

Calico CNI follows Microsoft's BYO (Bring Your Own) CNI concept, which allows businesses to choose their own CNI to meet their specific requirements. Administrators get complete Tigera support for Calico Open Source and can use the Azure Marketplace to deploy Tigera's Calico Cloud-Native Application Protection Platform (CNAPP) for active zero-trust container security throughout the development, deploy, and runtime phases.

Calico's role as AKS' CNI is aimed at alleviating industrywide pain points and bringing major benefits to users.

Meta moves Jest to the OpenJS Foundation

Jest, Meta Open Source's open source JavaScript testing framework, has been officially transferred to the OpenJS Foundation. Jest is the most popular testing framework in the JavaScript ecosystem, with over 17 million weekly downloads

and over 38,000 GitHub stars. It is used by companies of all sizes, including Amazon, Google, Microsoft, and Stripe.

This change has no impact on how Jest is created or distributed, and it has no direct impact on

developers who use Jest to test their apps.

Jest (internally referred to as 'jst') is an open source JavaScript testing framework that enables developers to create high-performance tests with minimal configuration and a straightforward API. Jest's motto is "a beautiful JavaScript Testing Framework," and in polls such as State of JS, Jest has garnered user satisfaction scores of above 90 per cent.

The Jest Open Collective has raised more than US\$ 70,000 for the Jest open source community so far. Jest has had significant enhancements thanks to the open source community. It is now mostly maintained by an external group of core contributors led by Simen Bekkhus. In fact, outside of Meta, practically all of the additions to Jest since 2018 have been from open source contributors.

iXsystems announces new TrueNAS releases

iXsystems, an open source pioneer and the company behind TrueNAS, has announced the availability of two major updates to TrueNAS Open Storage software editions. The launch of TrueNAS 13.0 brings significant performance improvements to its scale-up storage software. The availability of the latest version of TrueNAS

SCALE (22.02.1) marks the first major update to the newly-released scale-out and hyperconverged edition. Both versions of TrueNAS are designed and tested for their respective data-intensive workloads and made available so that all organisations can benefit

from true data freedom and open source economics.

TrueNAS 13.0, available as CORE (free, community edition) and Enterprise editions, has several significant enhancements over the 12.0 version. According to the company, the update of the underlying operating system to FreeBSD 13.0
